

2025 COMMUNITY HEALTH NEEDS ASSESSMENT

MORE

COMMUNITY VOICES

Tillamook County

IRS Section 501(r)(3) CHNA Compliance Checklist

1) A definition of the community served by the hospital facility and description of how the community was defined.	Page 8	4) A prioritized description of the significant health needs of the community identified through the CHNA, along with a description of the criteria and process used in identifying certain health needs as significant as well as prioritizing and selecting those significant health needs.	Section IV. and V.
2) A description of the process and methods used to conduct the CHNA, including identification of information gaps that limit the hospital facility's ability to assess the community's health needs.	Section V.	5) A description of the resources potentially available to address the significant health needs identified through the CHNA.	Section IV. A
3) A description of how the hospital facility solicited and took into account input received from persons who represent the broad interests of the community it serves.	Section IV. B	6) An evaluation of the impact of any actions that were taken, since the hospital facility finished conducting its immediately preceding CHNA to address the significant health needs identified in the hospital facility's prior CHNA(s). Executive Summary

Non-profit health systems, community-based organizations and public health agencies across the country all share a similar calling: to provide public services to help improve the lives of the community members they serve. The Community Health Needs Assessment (CHNA) is conducted every three years to support this calling by helping nonprofit hospitals understand the health needs of the community. The CHNA is a public document and represents the collaborative work between community stakeholders and the local hospital(s), partnering to identify the health needs of their community. The CHNA process engages communities in identifying high priority health needs, and in aligning the resources of community-based organizations, public health services and Adventist Health to achieve improved health for all. Through this collective effort, communities collect data and identify resources to maximize their focus on meeting the most significant community health needs over the next three years.

For 2025, Tillamook County collaborated with community partners to create a concise report that the entire community could contribute to and access, regardless of public health context or reading ability. Input was gathered from focus groups and key informants representing the broad interests of the community served by our hospital, and collaborative organizations. We intentionally prioritized gathering insights from local health officials with knowledge and expertise about community health needs, community-based organizations, medical providers, and members of medically underserved, low-income and minority populations.

Our assessment used a combination of primary and secondary data, providing the greatest understanding of community needs from the broadest range of perspectives. Primary data was collected from focus groups and key informant interviews conducted between May 2024 and July 2024. Eight significant health needs, which focused on the social determinants of health, were identified through in-depth analysis.

The local CHNA Steering Committee reviewed significant health needs, along with corresponding data, and prioritized needs based on severity, prevalence, alignment around common goals, feasibility of potential interventions and opportunities to maximize available resources over a three-year period. This collaborative effort resulted in the identification of the following high priority health needs:

Access to Care

Community Infrastructure

Housing

Mental Health

The following pages share opportunities where you, your family and your community can drive change for improved well-being. We hope this report is leveraged by all local partners and community members, empowering them to own the potential of healthy living for all. In addition to our comprehensive written CHNA report, please explore our living CHNA dashboard below. The entire report is published online and available in print form free of charge by contacting community.benefit@ah.org.

Identity of Steering Committee Hospital & Partner Organizations

To all that partnered with us, we say THANK YOU. To those now joining, we welcome you. Let's work together to inspire health, wholeness and hope in our community.

We thank the Tillamook County CHNA Steering Committee, who collaborated and partnered to create the 2025 CHNA. Through a series of three collaborative meetings, engagement of community members, and data review, each committee member brought their unique perspective as seen through their job and the work they performed during the CHNA process.

A. CHNA Community Defined

Getting to Know Our Community

Tillamook County is located on the Oregon coast along fertile grounds, recognized for its plentiful dairy farms and beautiful geography. With 75 miles of coastline, four bays, nine rivers and home to the Tillamook Creamery Visitor Center, there's plenty to explore. Our community enjoys the endless opportunities to take in the wind-swept shoreline, soaring sand dunes, pristine state parks and bustling harbors. During the summer, the Tillamook County Fair, parades and rodeos unify the community and contribute to the small-town rural feel.

Research suggests that up to 80% of health outcomes can be traced back to social determinants of health (SDOH), the nonmedical factors that influence health outcomes. For additional community context, below are a few SDOH data points:

- High school graduation rate of 79.6%.
- 35.04% of the population holds an Associate's level degree or higher, compared to 45.08% in Oregon.
- 22% adults age 18+ self-report as having no leisure-time physical activity.
- Based on the Area Median Income, residents spend 62.97% of their income on housing and transportation alone.

As a rural Oregon community, we recognize the challenges we face and are optimistic about finding opportunities to improve our health and well-being. In the following pages, we'll review lessons learned and accomplishments from the past three years. We'll dive deeper into the high priority needs, community voices and data that guided the Community Health Needs Assessment process.

Defining the Community We Serve

To define our community, we used the hospital's primary service area and vetted the zip codes with Steering Committee members. We also invited our Steering Committee members to expand the CHNA service area to include zip codes based on the constituents they serve.

The report area is located in the state of Oregon and includes a total population of 31,341 (based on the 2020 Decennial Census). The largest city in the report area is Tillamook city, with a population of 5,204. The report area is comprised of the following ZIP codes: 97102, 97107, 97108, 97112, 97118, 97122, 97130, 97131, 97134, 97135, 97136, 97141, 97147, 97149, 97368.

II. About Us

Adventist Health

Adventist Health is a faith-based, nonprofit, integrated health system serving more than 100 communities on the West Coast and Hawai'i, with over 440 sites of care, including 27 acute care facilities. Founded on Adventist heritage and values, Adventist Health provides care in hospitals, clinics, home care agencies, hospice agencies and joint-venture retirement centers in both rural and urban communities. Our compassionate and talented team of more than 38,000 includes employees, physicians, allied health professionals and volunteers driven in pursuit of one mission: living God's love by inspiring health, wholeness and hope. Guided by our mission, Adventist Health supports purposeful work to address the social drivers of health, with a special focus on underserved members of the communities in which we operate. Together, we are transforming the healthcare experience of our communities with a whole-person focus on physical, mental, spiritual and social healing to support well-being.

Adventist Health Tillamook

Adventist Health Tillamook has been serving Tillamook County as a faith-based, nonprofit healthcare organization since 1973. It includes a 25-bed critical access medical center in Tillamook, the largest hospital-based ambulance service in Oregon with four stations,

and six rural health medical offices across the northern Oregon coast and inland communities of Vernonia and Estacada. With over 500 associates and healthcare providers, Adventist Health Tillamook is part of Adventist Health, an integrated nonprofit system serving over 80 communities on the West Coast and Hawaii with more than 400 care sites.

Specialties Brought to our Community

- Audiology
- Behavioral Health
- Ear, Nose and Throat (ENT)
- Family Medicine
- Internal Medicine
- Northwest Heart Center
- Obstetrics and Gynecology
- Occupational Medicine
- Orthopedics
- Pediatrics
- Podiatry
- Urgent Care
- Urology

Medical center services include:

- 24-hour Ambulance and Emergency Department
- Home Health and Hospice
- Imaging
- Intensive Care
- Laboratory
- Maternity
- Outpatient Therapy Services
- Physical Therapy and Rehabilitation Services
- Sleep Lab
- Surgery

A Look Back: Activities Since 2022 CHNA

CHNA Successes

Over the last three years, Adventist Health Tillamook focused on access to care, financial stability and housing. To document our impact, we have been monitoring and evaluating progress through annual updates and the Community Health Implementation Strategy (CHIS). In collaboration with the community, we implemented goals, actions, solutions and programs to address each high priority need.

To address access to care, Adventist Health Tillamook and other community healthcare partners conducted assessments around cultural and linguistic access to care as well as workforce development. Additionally, a health literacy campaign was implemented in partnership with the Tillamook County Wellness Access to Care Committee. This initiative aimed to boost awareness and understanding for improved health outcomes. Together, we enhanced the understanding of basic health information, cancer and other chronic diseases prevention, and established how and when to access the best type of care to improve overall well-being. We encourage future collaboration with other community organizations to build and scale the work in addressing community health needs. For a full and complete reporting of programs and activities since the 2022 Community Health Needs Assessment, please visit this link: <https://www.adventisthealth.org/tillamook/about-us/community-benefit/>

A Look Forward: After the CHNA Report

The next step in our CHNA process is to complete a CHIS. The goal of the CHIS is to strategically implement programs using evidence-informed solutions that address the high priority needs identified in our 2025 CHNA. Together, Tillamook County, local public health officials, community-based organizations, medical providers, students, parents, and members of underserved, low-income and minority populations will develop a three-year strategic plan to work towards addressing the needs of our community.

We believe the power of community transformation lies in the hands of the community. We're calling for more collaboration to create intentional strategies that improve health needs for all. Everyone's voice matters, so we want to hear more of your ideas and partner closely with those who want to drive meaningful change. If you would like to learn more, share ideas or stay connected, please contact us at community.benefit@ah.org.

Steering Committee.

III. High Priority Health Needs

Access to Care

Access to care refers to the timely use of personal health services to achieve the best health outcomes. This concept encompasses the availability, affordability and appropriateness of healthcare services, and accessibility for all individuals, regardless of income, location or social standing. Access to care directly affects population health, influencing rates of preventable diseases, overall mortality and quality of life. Ensuring equitable access to healthcare is a central public health goal, particularly in reducing health disparities among underserved populations.

In the United States, three in ten people do not have access to a reliable source of primary care (National Association of Community Health Centers), and the American Medical Association projects a shortage of 17,000 – 45,000 primary care doctors over the next decade. Additionally, factors such as being uninsured, lacking access to transportation, limited English proficiency and insufficient provider availability prevent people from receiving the services they need at the right time and place. Tillamook County residents face similar limiting factors, often to a greater extent, making access to care a priority need.

Geography in the Tillamook County service area can be challenging when it comes to accessing health care. Only 13.81% of the population lives within a half mile of public transit compared to 56.25% in Oregon. One focus group participant described that “transportation

could be better. Better access to going over the hill for the care that we can’t have here.” Even with access to public transit, key informants note that “our transportation district has been struggling with [...] having enough drivers, so we’ve lost routes.” When asked about getting all the medical care needed to live a healthy life, a community survey showed 27% of respondents did not receive the care they needed. One in four respondents attributed their lack of care to transportation related barriers like location of medical care, getting to the clinic was too hard and inconvenient hours of operation.

Given that many Tillamook County residents live in underserved areas, increasing access and reducing barriers to healthcare in our community can improve health outcomes and reduce disparities. For additional data, see the following pages.

Data Highlights

Community Voices: *exploring local perceptions, thoughts & beliefs*

"We closed three of our clinics recently, primarily because we can't recruit physicians."

"...I've been in situations with people that have gone through psychosis and there's no services here for treatment centers or any of that unless they go to Lincoln City or Portland."

"...not having insurance can be a big problem. And even if you do have insurance, maybe that's not enough."

"...healthcare is a difficult role to navigate for the most educated or experienced."

"Our transportation could be better. Better access to going over the hill for the care that we can't have here."

"There's no memory care in the county. Huge gap."

"I think the other thing too is a lack of culturally relevant services and providers."

"We do have very small amounts of mental health services in Tillamook County, and they're getting less all the time. The amount of turnover is very high. The wait time is very long. And even if people are seeing a counselor, [they] may be... able to see [one] once a month instead of every week, which a lot of people need."

"...a lot of other people in our community don't have their own Spanish speaking staff, so [they] aren't using appropriate language lines. They're relying on other people to translate for them instead of using certified interpreters."

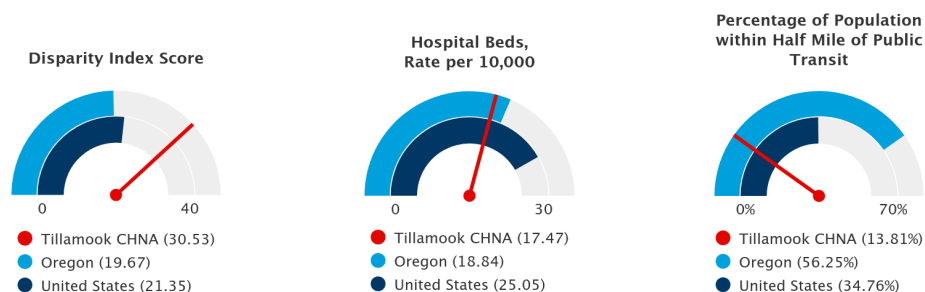

"...for people that do have insurance, their insurance either has a high deductible or copays and [it's] very difficult for them to still afford the care they need."

"I'm getting people who never had healthcare to understand that an annual physical was something you just did and that you sought healthcare in an office, not the emergency department. So that was a really tough transition...They were raised without healthcare."

"We are working on some telepsych services in the emergency department, which are really necessary [because] psychiatrists are not available in Oregon..."

"Our transportation district has been struggling with...having enough drivers, so we've lost routes."

"I think some providers...have to be pretty comfortable in [their] skin and [their] skill set to be able to practice...in a rural environment where you don't have everything you had in the big urban center."

Community Health Needs Assessment Full Report

Location

Tillamook CHNA

Health Needs: Access to Care

Availability - Hospitals & Clinics - FQHCs, Rate Per Low-Income Population

This indicator reports the number of Federally Qualified Health Centers (FQHCs) in the community. This indicator is relevant because FQHCs are community assets that provide health care to vulnerable populations; they receive extra funding from the federal government to promote access to ambulatory care in areas designated as medically underserved.

Within the report area, there are 5 Federally Qualified Health Centers. This means there is a rate of 15.97 Federally Qualified Health Centers per 100,000 total population.

Report Area	Total Population (2020)	Number of Federally Qualified Health Centers	Rate of Federally Qualified Health Centers per 100,000 Population
Tillamook CHNA	31,300	5	15.97
Clatsop County, OR	41,072	2	4.87
Lincoln County, OR	50,395	9	17.86
Tillamook County, OR	27,390	4	14.60
Oregon	4,237,256	208	4.91
United States	334,735,155	12,138	3.63

Note: This indicator is compared to the state average.
Data Source: US Department of Health & Human Services, Center for Medicare & Medicaid Services, [Provider of Services File](#). 2024.

Federally Qualified Health Centers, POS December 2024

- Federally Qualified Health Centers, POS December 2024
- Tillamook CHNA

Availability - Hospitals - Proximity to Hospitals with ER

This indicator reports the percentage of the total population living within 1 mile of a hospital with an emergency room. Having good access to hospitals with an emergency room is important for community health because these hospitals play an important role in rapid and serious medical conditions.

As of 2023, of the report area's 31,300 total population, 2,178 or 6.96% live within 1 mile of a hospital with an emergency room. This is greater than the state's reported rate of 6.86%.

Report Area	Total Population	Population Within 1 Mile of a Hospital with ER	Percent Within 1 Mile of a Hospital with ER
Tillamook CHNA	31,300	2,178	6.96%
Clatsop County, OR	41,072	5,075	12.36%
Lincoln County, OR	50,395	4,971	9.86%
Tillamook County, OR	27,390	2,024	7.39%
Oregon	4,237,256	290,549	6.86%
United States	334,735,155	27,942,571	8.35%

Note: This indicator is compared to the state average.
Data Source: US Department of Health & Human Services, Center for Medicare & Medicaid Services, Provider of Services File, 2023.

All Hospitals, POS December 2024

- All Hospitals, POS December 2024
- Tillamook CHNA

Availability - Hospitals - Hospital Beds Per Capita

This indicator reports hospital bed availability by estimating the number of hospital beds per 10,000 population. This calculation allocates the number of hospital beds at a given hospital (location) and assigns them to ZIP codes in the hospital service area based on the proportion of patients coming from each ZIP code. This provides an estimation of how hospital capacity (beds) affects the population in ZIP codes served by the hospital.

Report Area	Hospital Beds, Total	Total Population (2020)	Hospital Beds, Rate per 10,000
Tillamook CHNA	54	31,300	17.47
Clatsop County, OR	86	41,072	20.94
Lincoln County, OR	80	50,395	15.87
Tillamook County, OR	50	27,390	18.25
Oregon	7,985	4,237,256	18.84
United States	830,171	331,449,281	25.05

Note: This indicator is compared to the state average.
Data Source: Centers for Medicare & Medicaid Services, Hospital Service Area, 2023.

Barriers - Medical Insurance - Population without Medical Insurance

The lack of health insurance is considered a *key driver* of health status. In the report area 5.07% of the total civilian non-institutionalized population are without health insurance coverage. The rate of uninsured persons in the report area is less than the state average of 6.23%. This indicator is relevant because lack of insurance is a primary barrier to healthcare access including regular primary care, specialty care, and other health services that contributes to poor health status.

Report Area	Total Population (For Whom Insurance Status is Determined)	Uninsured Population	Uninsured Population, Percent
Tillamook CHNA	29,816	1,511	5.07%
Clatsop County, OR	40,762	2,651	6.50%
Lincoln County, OR	50,255	4,054	8.07%
Tillamook County, OR	26,746	1,263	4.72%
Oregon	4,196,946	261,323	6.23%
United States	327,425,278	28,000,876	8.55%

Note: This indicator is compared to the state average.
Data Source: US Census Bureau, American Community Survey, 2019-23.

Uninsured Population, Percent by Tract, ACS 2019-23

Uninsured Population by Gender

This indicator reports the uninsured population by gender.

The percentage values could be interpreted as, for example, "Of all the male population within the report area, the proportion without health insurance coverage is (value)."

Report Area	Male	Female	Male, Percent	Female, Percent
Tillamook CHNA	893	618	6.02%	4.12%
Clatsop County, OR	1,566	1,085	7.75%	5.28%
Lincoln County, OR	2,297	1,757	9.51%	6.73%
Tillamook County, OR	707	556	5.36%	4.11%
Oregon	150,961	110,362	7.25%	5.22%
United States	15,443,840	12,557,036	9.59%	7.55%

Data Source: US Census Bureau, *American Community Survey*. 2019-23.

Uninsured Population by Age Group, Percent

This indicator reports the percentage of uninsured population by age group.

The percentage values could be interpreted as, for example, "Of all the population under age 18 within the report area, the proportion without health insurance coverage is (value)."

Report Area	Under Age 18	Age 18 - 64	Age 65 +
Tillamook CHNA	0.22%	9.50%	0.25%
Clatsop County, OR	4.37%	10.04%	0.00%
Lincoln County, OR	3.41%	14.08%	0.61%
Tillamook County, OR	0.04%	8.79%	0.28%
Oregon	3.18%	9.08%	0.54%
United States	5.39%	11.98%	0.83%

Barriers - Transportation - Distance to Public Transit

This indicator measures the proportion of the population living within 0.5 miles of a GTFS or fixed-guideway transit stop. Transit data is available from over 200 transit agencies across the United States, as well as all existing fixed-guideway transit service in the U.S. This includes rail, streetcars, ferries, trolleys, and some bus rapid transit systems.

Report Area	Total Population	Population Within 0.5 Miles of Public Transit	Percentage of Population within Half Mile of Public Transit
Tillamook CHNA	18,010	2,488	13.81%
Clatsop County, OR	38,562	16,133	41.84%
Lincoln County, OR	47,881	19,244	40.19%
Tillamook County, OR	26,076	6,755	25.91%
Oregon	4,081,943	2,295,985	56.25%
United States	322,903,030	112,239,342	34.76%

Note: This indicator is compared to the state average.
Data Source: Environmental Protection Agency, EPA - Smart Location Database. 2021.

Distance to Nearest Transit Stop, (Meters) by Block Group, EPA SLD 2021

- 800 - 1200 Meters (0.5 - 0.75 Miles)
- 400 - 800 Meters (0.25 - 0.5 Miles)
- 200 - 400 Meters (0.125 - 0.25 Miles)
- Closers than 200 Meters (< 0.125 Miles)
- Further than 1200 Meters (> 0.75 Miles)
- Tillamook CHNA

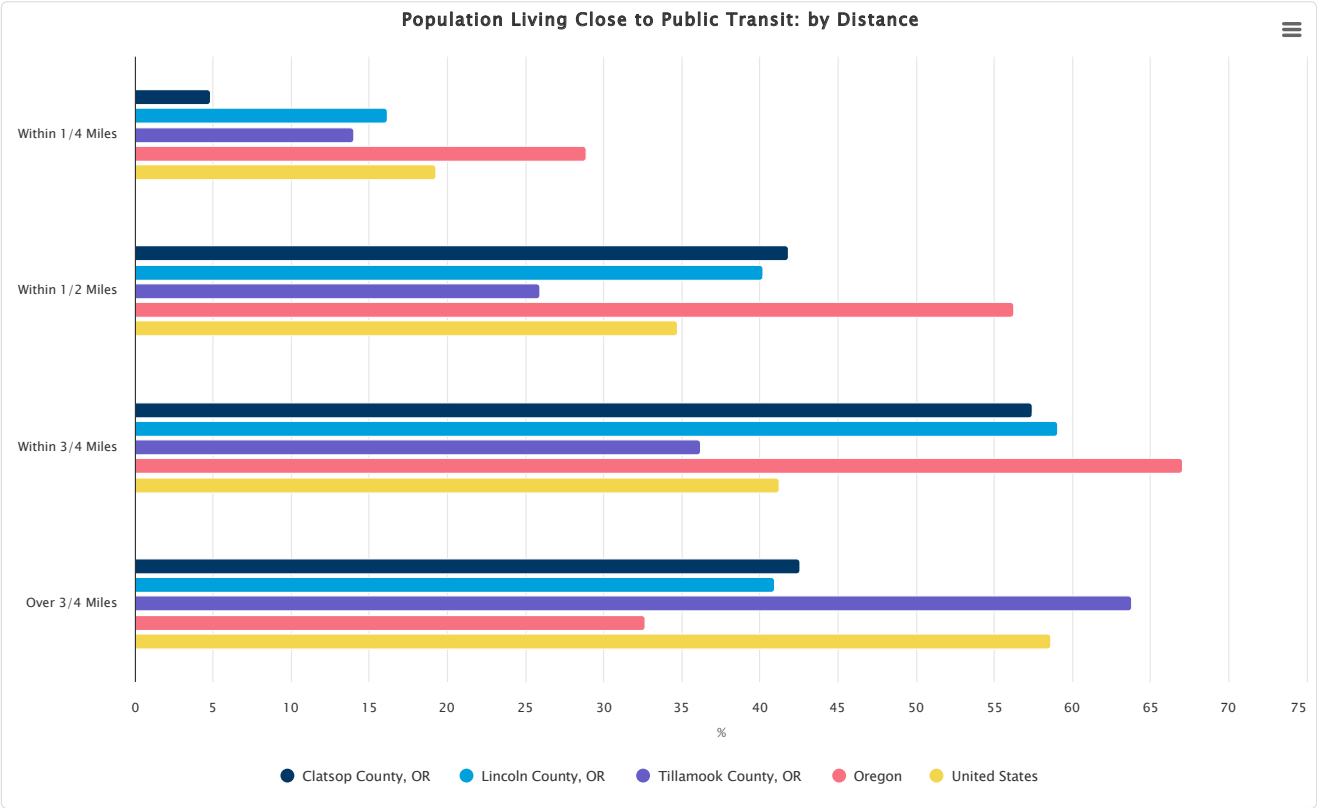

III. HIGH PRIORITY HEALTH NEEDS

Population Living Close to Public Transit: by Distance

This indicator reports the percentages of population living within 1/4, 1/2, 3/4, and over 3/4 miles from the nearest transit stop.

Report Area	Within 1/4 Miles	Within 1/2 Miles	Within 3/4 Miles	Over 3/4 Miles
Clatsop County, OR	4.81%	41.84%	57.45%	42.55%
Lincoln County, OR	16.14%	40.19%	59.08%	40.92%
Tillamook County, OR	13.99%	25.91%	36.24%	63.76%
Oregon	28.85%	56.25%	67.05%	32.65%
United States	19.25%	34.76%	41.26%	58.64%

Data Source: Environmental Protection Agency, EPA - Smart Location Database, 2021.

Barriers - Transportation - Households with No Vehicle

This indicator reports the number and percentage of households with no motor vehicle based on the latest 5-year American Community Survey estimates. Of the 13,071 total households in the report area, 571 or 4.37% are without a motor vehicle.

Report Area	Total Occupied Households	Households with No Motor Vehicle	Households with No Motor Vehicle, Percent
Tillamook CHNA	13,071	571	4.37%
Clatsop County, OR	18,095	1,457	8.05%
Lincoln County, OR	22,829	1,066	4.67%
Tillamook County, OR	11,817	555	4.70%
Oregon	1,701,548	120,842	7.10%
United States	127,482,865	10,602,826	8.32%

Note: This indicator is compared to the state average.
Data Source: US Census Bureau, American Community Survey, 2019-23.

[View larger map](#)

Households with No Vehicle, Percent by Tract, ACS 2019-23

Households with No Motor Vehicle by Tenure

This indicator reports the total and percentage of households with no vehicle by tenure. These numbers in the following table could be interpreted as (take the first two columns as an example), "Within the report area, there are a total of (value) owner-occupied households with no vehicle. This accounts for (value) of all the owner-occupied households."

Report Area	Owner-Occupied Households	Owner-Occupied Households, Percent	Renter-Occupied Households	Renter-Occupied Households, Percent
Tillamook CHNA	303	3.11%	268	8.06%
Clatsop County, OR	388	3.48%	1,069	15.41%
Lincoln County, OR	450	2.76%	616	9.42%
Tillamook County, OR	294	3.40%	261	8.23%
Oregon	25,493	2.36%	95,349	15.30%
United States	2,636,344	3.18%	7,966,482	17.87%

Data Source: US Census Bureau, American Community Survey. 2019-23.

Barriers - Health Literacy - Educational Attainment

Within the report area there are 2,198 persons aged 25 and older without a high school diploma (or equivalency) or higher. This represents 9.44% of the total population aged 25 and older. This indicator is relevant because educational attainment is linked to positive health outcomes ([Freudenberg & Ruglis, 2007](#)).

Report Area	Total Population Age 25+	Adults Age 25+ with No High School Diploma	Adults Age 25+ with No High School Diploma, Percent
Tillamook CHNA	23,294	2,198	9.44%
Clatsop County, OR	31,093	2,225	7.16%
Lincoln County, OR	39,558	3,262	8.25%
Tillamook County, OR	21,007	1,979	9.42%

Population with No High School Diploma (Age 25+), Percent by Tract, ACS 2019-23

III. HIGH PRIORITY HEALTH NEEDS

Population with No High School Diploma by Gender

This indicator reports the population age 25+ with no high school diploma by gender. The percentage values could be interpreted as, of all the males age 25+ within the report area, the percentage without a high school diploma is 11.33%; of all the females age 25+ within the report area, the percentage without a high school diploma is 7.55%.

Report Area	Male	Female	Male, Percent	Female, Percent
Tillamook CHNA	1,317	881	11.33%	7.55%
Clatsop County, OR	1,357	868	8.88%	5.49%
Lincoln County, OR	1,870	1,392	9.95%	6.70%
Tillamook County, OR	1,177	802	11.34%	7.55%
Oregon	136,835	113,386	9.19%	7.40%
United States	12,672,705	11,557,512	11.38%	9.87%

Data Source: US Census Bureau, American Community Survey, 2019-23.

Population with No High School Diploma by Ethnicity Alone

This indicator reports the population age 25+ with no high school diploma by ethnicity alone. The percentage values could be interpreted as, of all the Hispanic population age 25+ within the report area, the percentage without a high school diploma is 36.62%; of all the non-Hispanic population age 25+ within the report area, the percentage without a high school diploma is 7.26%.

Report Area	Hispanic or Latino	Not Hispanic or Latino	Hispanic or Latino, Percent	Not Hispanic or Latino, Percent
Tillamook CHNA	631	1,567	36.62%	7.26%
Clatsop County, OR	221	2,004	9.91%	6.94%
Lincoln County, OR	842	2,420	32.24%	6.55%
Tillamook County, OR	559	1,420	36.90%	7.29%
Oregon	92,410	157,811	28.19%	5.86%
United States	10,132,918	14,097,299	27.46%	7.36%

Data Source: US Census Bureau, American Community Survey, 2019-23.

Population with No High School Diploma by Race Alone, Percent

This indicator reports the percentage of population age 25+ with no high school diploma by race alone in the report area. The percentage values could be interpreted as, for example, "Of all the white population age 25+ in the report area, the percentage with no high school diploma is (value)."

Report Area	White	Black or African American	American Indian or Alaska Native	Asian	Native Hawaiian or Pacific Islander	Some Other Race	Multiple Race
Tillamook CHNA	8.37%	0.00%	33.82%	2.63%	0.00%	53.83%	6.84%
Clatsop County, OR	5.86%	36.92%	7.01%	25.26%	0.00%	17.93%	12.57%

Barriers - Health Literacy - Limited English Proficiency

This indicator reports the percentage of the population aged 5 and older who speak a language other than English at home and speak English less than "very well". This indicator is relevant because an inability to speak English well creates barriers to healthcare access, provider communications, and health literacy/education. Of the 29,320 total population aged 5 and older in the report area, 1,360 or 4.64% have limited English proficiency.

Report Area	Population Age 5+	Population Age 5+ with Limited English Proficiency	Population Age 5+ with Limited English Proficiency, Percent
Tillamook CHNA	29,320	1,360	4.64%
Clatsop County, OR	39,435	518	1.31%

Community Infrastructure

Community infrastructure refers to the physical and organizational structures that support the health, safety and well-being of residents. This encompasses essential services that people depend on daily, such as schools, transportation systems and internet access, as well as infrastructure that prioritizes public health including walkability, expanding green spaces and water systems. Community infrastructure is a foundation for equitable access to services and resources. Community infrastructure contributes to healthier living conditions, reduces health disparities and promotes social determinants of health, such as stable housing, employment opportunities and environmental quality. When community infrastructure is accessible, safe, and well-maintained, it can reduce chronic illnesses, improve mental health and enhance social connections within a community.

Geography in the Tillamook County service area makes improving quality of life through community infrastructure challenging. Along the Oregon coast, an important community infrastructure need is expanding internet access to bridge the digital divide. Focus group participants mentioned “a lot of people don’t have phones or there’s not cell service in a lot of Tillamook

County or they don’t have reliable phones.” In our community, 11.01% of households either have no internet access at all or slow internet. Meanwhile, the internet access disparities are exacerbated by 5.82% of households who don’t own any type of computers, including desktops, laptops, smartphones or tablets. One key informant noted the importance “to take advantage of technology for health-related concerns [...] so people can feel like they’re [...] part of their community and society.”

Given that many Tillamook County residents live in underserved areas, investing in infrastructure that fosters health and well-being can transform communities, improve health outcomes and reduce disparities. For additional data, see the following pages.

Data Highlights

Community Voices: *exploring local perceptions, thoughts & beliefs*

"...we have a childcare desert, so we definitely are very low on childcare. I think all of Oregon is now classified as a childcare desert...it just has to do with having very, very few childcare slots related to the number of children that are in your community."

"...there's a huge lack of childcare..."

"There's been great strides in [internet] connectivity and more work being done, but there are spots where it's difficult for people to connect...and it's almost universally necessary if you're [going] to function in society anymore."

"...there are fewer walkable options...if you live a little bit further out...and you don't have transportation. It's [going to] more challenging."

"...one of the big challenges with the bus system is...they have not been able to secure enough drivers...as a result...some of the routes have been eliminated..."

"...what it means for our families is that it will keep some families in poverty because they are paying exorbitant amount for childcare if they can find it..."

"I just worry. My kids want to play outside all the time. There's very little places for them to play."

"Most everyone expresses not feeling safe or comfortable on this potentially wonderful trail, including employees on lunch break, due to drug activity or unhoused people sheltering."

Access to Childcare - Childcare Access Disparities

This indicator reports the percentage of the report area population living in a childcare desert by population race and ethnicity. A childcare desert is defined as a neighborhood (census tract) without a child daycare center. The disparity index score is a relative measure which expresses the magnitude of disparity across population groups, with a score of 0 representing perfect equality, and a score of 100 representing perfect disparity.

Note: The dataset only includes center based child day care locations (including those located at schools and religious institutes) and does not include group, home, and family based child day cares.

Report Area	Non-Hispanic White	Hispanic or Latino	Non-Hispanic Black	Non-Hispanic Other Race	Disparity Index Score
Tillamook CHNA	54.58%	34.67%	45.09%	43.74%	4.24

Community Amenities - Walkability

The National Walkability Index (2021) is a nationwide index score developed by EPA that ranks block groups according to their relative walkability using selected variables on density, diversity of land uses, and proximity to transit from the Smart Location Database. The block groups are assigned their final National Walkability Index scores on a scale of 1 to 20 where the higher a score, the more walkable the community is.

Report Area	Total Population (2018)	Walkability Index Score
Tillamook CHNA	29,792	7
Clatsop County, OR	38,562	10
Lincoln County, OR	47,881	10
Tillamook County, OR	26,076	8
Oregon	4,081,943	12
United States	322,903,030	10

Note: This indicator is compared to the state average.

Population Percentages by Tiered National Walkability Index

This indicator reports the percentages of population living in a neighborhood of one of four walkability levels: least walkable, below average walkable, above average walkable, and most walkable. The walkability level is categorized based on the National Walkability Index (NWI) value, i.e., least walkable (NWI 1.0-5.75), below average walkable (NWI 5.76-10.5), above average walkable (NWI 10.51-15.25), most walkable (NWI 15.26-20.0).

Report Area	Least Walkable	Below Average Walkable	Above Average Walkable	Most Walkable
Clatsop County, OR	22.46%	25.48%	34.14%	17.92%
Lincoln County, OR	30.90%	19.49%	26.75%	22.85%

United States	19.92%	39.51%	30.74%	9.84%

Data Source: Environmental Protection Agency, EPA - Smart Location Database. 2021.

III. HIGH PRIORITY HEALTH NEEDS

Internet & Technology - Cellular Plan Only

This indicator reports the percentage of households who report having access to the internet through a mobile or cellular data plan with no other type of internet subscription. Of the 13,071 total households in the report area, 1,113 or 8.52% have internet access through a mobile or cellular plan only.

Note: The ACS 2019-23 questions about internet/computer usage are not asked for the group quarters population, so data do not include people living in housing such as dorms, prisons, nursing homes, etc.

Report Area	Total Households	Households with Cellular Internet Only	Households with Cellular Internet Only, Percent
Tillamook CHNA	13,071	1,113	8.52%

Tillamook CHNA

Internet & Technology - No High-Speed Internet

This indicator reports the percentage of households who either use dial-up as their only way of internet connection, or have internet access but don't pay for the service, or have no internet access in their home, based on the 2019-2023 American Community Survey estimates. Of the 13,071 total households in the report area, 1,439 or 11.01% have no or slow internet.

Note: The ACS2019-23 questions about internet/computer usage are not asked for the group quarters population, so data do not include people living in housing such as dorms, prisons, nursing homes, etc.

Report Area	Total Households	Households with No or Slow Internet	Households with No or Slow Internet, Percent
Tillamook CHNA	13,071	1,439	11.01%
Clatsop County, OR	18,095	1,633	9.02%
Lincoln County, OR	22,829	2,100	9.20%
Tillamook County, OR	11,817	1,315	11.13%

Households with No or Slow Internet, Percent by Tract, ACS 2019-23

Population without a Computer or an Internet Subscription by Employment Status

This indicator reports the total and percentage of population that have no computer or Internet subscription by employment status based on the 2019-2023 American Community Survey estimates. Of the report area's 12,108 employed population, 900 or 7.43% have no computer or Internet subscription while of its 596 unemployed population, 45 or 7.55% have no computer or Internet subscription. Notice that the universe of this indicator is all civilian household population 16 years and over, including population in labor force (i.e., the employed population and the unemployed population) and population not in labor force (not listed in this table).

Report Area	Total Employed Population	Employed with No Computer or Internet Subscription, Total	Employed with No Computer or Internet Subscription, Percent	Total Unemployed Population	Unemployed with No Computer or Internet Subscription, Total	Unemployed with No Computer or Internet Subscription, Percent
Tillamook CHNA	12,108	900	7.43%	596	45	7.55%

Data Source: US Census Bureau, American Community Survey. 2019-23.

Housing

Housing refers to the availability, affordability, quality and stability of living environments, which directly influences health outcomes. Housing has become an increasingly significant challenge, particularly as housing costs continue to outpace wage growth. High housing costs and limited housing supply can significantly hinder the ability to recruit and retain care providers. According to the U.S. Census Bureau, nearly half (49.7%) of renter households are considered cost-burdened, spending more than 30% of their income on housing, which leaves limited funds for other essentials such as healthy food, healthcare and savings. Available and affordable housing is an important need for healthcare providers to create place attachment and thrive alongside the entire community.

The American Public Health Association (APHA) reports that housing instability is linked to higher rates of chronic health conditions such as asthma and hypertension, as well as increased mental health issues like anxiety and depression. When families struggle to afford their homes, they face a higher risk of displacement, poor housing conditions or homelessness and increased stress which affects community life. Stable housing can enable healthcare professionals to establish long-term roots in their community and result in better health outcomes by lowering the risk of related health issues.

In Tillamook County, a family earning the Area Median Income (AMI) spends 62.97% of their income on housing and transportation alone, as modeled by the U.S. Department of Housing and Urban Development (HUD). Throughout our focus groups and key informant interviews, a common theme was a low housing supply coupled with an upward trend of homelessness. One focus group participant mentioned that housing “inventory is low. [We are] trying to hire nurses, we lose a lot of excellent candidates [because] they cannot find housing.” Key informants noted that we have “an unnumbered population of high school students that are homeless, that couch surf or live in their car, or live in the woods.” The secondary data shows that 5.62% of students in reported school districts experience homelessness, higher than the statewide rate of 3.50%.

In Tillamook County, more housing can help alleviate severe housing cost burdens. By improving housing in our community, we can enhance health outcomes and reduce disparities. For additional data points, see the following pages.

Data Highlights

Community Voices: *exploring local perceptions, thoughts & beliefs*

"We all want to help people. No one wants other people to be homeless."

"I can also tell you five years ago we had...80-90 kids in the school system that didn't have beds. Now we have 200."

"Our homeless population has skyrocketed the last couple of years."

"...there's a lot of people that come here that are making good money, but they can't find a place to live."

"There's a lack of housing being developed in our area right now. They have recently put up some apartment complexes, which has drastically helped, but it's not enough for the influx of people coming here."

"[Housing] inventory is low. [We are] trying to hire nurses. We lose a lot of excellent candidates. They cannot find housing..."

"Low-income housing is very limited. The vacation rentals are taking...over the coast. A lot of these people that own these houses only come once a year and that's it. So they don't even rent them out. And so that's a big issue."

"...they come to Oregon, they scout and look for places. They realize that even if they have the money or finances, it's exorbitantly expensive. They can't afford it and then they have to decline the job offer."

"...sometimes [housing costs] pushes them into homelessness where they don't have anywhere else to go. So maybe they're living out of their car. Maybe they've got a dilapidated travel trailer. Maybe they're living up in the woods..."

"...there's not a lot of houses here in Tillamook...Tillamook County has got...like 1,200 short term rentals owned by corporations that don't live here...so that's 1,200 homes that are off the market, that nobody...can buy and use as workforce housing or affordable housing."

"We have...an unnumbered population of...high school students that are homeless, that couch surf or live in their car, or live in the woods..."

Basic Needs: Housing

Homelessness - Evictions

This indicator reports information about formal evictions based on court records from from 48 states and the District of Columbia, compiled by the Eviction Lab. The number evictions and eviction filings within the report area is shown in below. The “filing rate” is the ratio of the number of evictions filed in an area over the number of renter-occupied homes in that area.

Note: Indicator data do not include information about "informal evictions", or those that happen outside of the courtroom.

Report Area	Eviction Filing Rate	Eviction Threatened Rate	Eviction Judgement Rate
Tillamook CHNA	0.86%	0.86%	0.71%
Clatsop County, OR	2.41%	2.26%	1.07%
Lincoln County, OR	1.46%	1.38%	0.87%

Homelessness - Students Experiencing Homelessness

This indicator reports the number of children and youth experiencing homelessness enrolled in the public school system during the 2021-2022 school year. This data source reports the number of students experiencing homelessness, defined as individuals who lack a fixed, regular, and adequate nighttime residence. This includes those who are sharing the housing of others, living in motels, hotels, or camping grounds, staying in emergency transitional shelters, or are unsheltered. Data are aggregated to the report-area level based on school-district summaries where three or more children experiencing homelessness are counted.

In the report area, of the 3,679 students enrolled in reported districts during the 2021-22 school year, there were 207 or 5.62% students experiencing homelessness, which is higher than the statewide rate of 3.41%.

Note: Data are available for 100.00% school districts in the report area, representing 100.00% of the public school student population.

Report Area	Students in Reported Districts	Students Experiencing Homelessness	Students Experiencing Homelessness, Percent	Districts Reporting	Students in Reported Districts
Tillamook CHNA	3,679	207	5.62%	100.00%	100.00%
Clatsop County, OR	4,897	265	5.41%	83.30%	97.60%

III. HIGH PRIORITY HEALTH NEEDS

Students Experiencing Homelessness by Primary Nighttime Residence

This table and chart below report the number of students experiencing homelessness by their primary nighttime residence. Data represent students who were enrolled in the public school system during the 2021-2022 school year. The data are aggregated at the report-area level based on school district summaries where three or more students were counted.

A brief description of each column is provided below:

- **Doubled-up:** Refers to doubled-up or shared housing due to loss of housing, economic hardship, or similar reasons.
- **Unsheltered:** Includes situations such as living in cars, parks, campgrounds, temporary trailers (including FEMA trailers), or abandoned buildings.
- **Hotels/Motels:** As indicated by the name, refers to stays in hotels or motels.
- **Shelters and Transitional Housing:** Refers to stays in shelters or transitional housing programs, as indicated.

Report Area	Total	Doubled-up	Unsheltered	Hotels/motels	Shelters and transitional housing

Data Source: U.S. Department of Housing and Urban Development, *HUD Annual Homeless Assessment Report (AHAR)*, 2023.

Housing Costs - Median Household Income

This indicator reports median household income based on the latest 5-year American Community Survey estimates. This includes the income of the householder and all other individuals 15 years old and over in the household, whether they are related to the householder or not. Because many households consist of only one person, average household income is usually less than average family income. There are 13,071 households in the report area, with an average income of \$84,371 and a median income of \$65,427.

Report Area	Total Households	Average Household Income	Median Household Income
Tillamook CHNA	13,071	\$84,371	\$65,427
Clatsop County, OR	18,095	\$92,615.37	\$68,705
Lincoln County, OR	22,829	\$83,482.79	\$61,314
Tillamook County, OR	11,817	\$84,600.85	\$66,551
Oregon	1,701,548	\$108,321.05	\$80,426
United States	127,482,865	\$110,490.58	\$78,538

Note: This indicator is compared to the state average.

III. HIGH PRIORITY HEALTH NEEDS

Housing Costs - Severe Housing Cost Burden (50%)

This indicator reports the percentage of the households where housing costs are 50% or more total household income. This indicator provides information on the cost or monthly housing expenses for owners and renters. The information offers a measure of housing affordability and excessive shelter costs. The data also serve to aid in the development of housing programs to meet the needs of people at different economic levels.

Report Area	Total Households	Severely Burdened Households	Severely Burdened Households, Percent
Tillamook CHNA	13,071	1,748	13.37%
Clatsop County, OR	18,095	2,718	15.02%

Severely Cost-Burdened Households by Tenure, Total

This data shows the number of households that spend more than 50% of the household income on housing costs. In the report area, there were 1,748 severely cost burdened households according to the U.S. Census Bureau American Community Survey (ACS) 2019-2023 5-year estimates. The data for this indicator is only reported for households where household housing costs and income earned was identified in the American Community Survey.

Report Area	Severely Burdened Households	Severely Burdened Rental Households	Severely Burdened Owner-Occupied Households w/ Mortgage	Severely Burdened Owner-Occupied Households w/o Mortgage
Tillamook CHNA	1,748	568	813	371

Housing Costs - Affordable Housing

This indicator reports the number and percentage of housing units affordable at various income levels. Affordability is defined by assuming that housing costs should not exceed 30% of total household income. Income levels are expressed as a percentage of each county's area median household income (AMI).

Report Area	Units Affordable at 15% AMI	Units Affordable at 30% AMI	Units Affordable at 40% AMI	Units Affordable at 50% AMI	Units Affordable at 60% AMI	Units Affordable at 80% AMI	Units Affordable at 100% AMI	Units Affordable at 125% AMI

Housing Costs - Housing + Transportation Affordability Index

This indicator reports information about location affordability. Affordability is calculated by estimating the percentage of household income needed for combined housing and transportation costs for a family earning the Area Median Income (AMI). The expected values for housing and transportation are modelled by the US Department of Housing and Urban Development (HUD) using data from the US Census Bureau and the US Department of Transportation.

Report Area	Total Households	Median Household Income	Percentage of Income Spent on Housing	Percentage of Income Spent on Transportation	Percentage of Income Spent on Housing and Transportation
Tillamook CHNA	11,681	43,531	25.01%	37.96%	62.97%

Location Affordability Index, Family at AMI, Percent Income Spent on Housing and Transportation by Tract, HUD & DOT 2019

Housing Quality - Substandard Housing - Severe Housing Problems

This indicator reports the number and percentage of owner- and renter-occupied housing units having at least one of the following conditions: 1) lacking complete plumbing facilities, 2) lacking complete kitchen facilities, 3) with 1.51 or more occupants per room, 4) selected monthly owner costs as a percentage of household income greater than 50%, and 5) gross rent as a percentage of household income greater than 50%. Selected conditions provide information in assessing the quality of the housing inventory and its occupants. This data is used to easily identify homes where the quality of living and housing can be considered substandard.

Report Area	Occupied Households	Percentage of Households with One or More Severe Problems
Tillamook CHNA	16,850	15.82%
Clatsop County, OR	16,650	15.05%
Lincoln County, OR	22,095	13.40%

Oregon	1,658,090	14.05%
United States	125,207,785	13.07%

Note: This indicator is compared to the state average.
Data Source: US Department of Housing and Urban Development, [Consolidated Planning/CHAS Data](#). 2017-2021.

Housing Quality - Renter Occupied Households

Tenure provides a measurement of home ownership, which has served as an indicator of the nation's economy for decades. This data covers all occupied housing units, which are classified as either owner occupied or renter occupied. These data are used to aid in the distribution of funds for programs such as those involving mortgage insurance, rental housing, and national defense housing. Data on tenure allows planners to evaluate the overall viability of housing markets and to assess the stability of neighborhoods. The data also serve in understanding the characteristics of owner occupied and renter occupied units to aid builders, mortgage lenders, planning officials, government agencies, etc., in the planning of housing programs and services.

Renter-Occupied Housing

All occupied housing units that are not owner occupied, whether they are rented or occupied without payment of rent, are classified as renter occupied.

Report Area	Total Occupied Housing Units	Renter-Occupied Housing Units	Percent Renter-Occupied Housing Units
Tillamook CHNA	13,071	3,324	25.43%
Clatsop County, OR	18,095	6,935	38.33%

Housing Quality - Owner Occupied Households

Tenure provides a measurement of home ownership, which has served as an indicator of the nation's economy for decades. This data covers all occupied housing units, which are classified as either owner occupied or renter occupied. These data are used to aid in the distribution of funds for programs such as those involving mortgage insurance, rental housing, and national defense housing. Data on tenure allows planners to evaluate the overall viability of housing markets and to assess the stability of neighborhoods. The data also serve in understanding the characteristics of owner occupied and renter occupied units to aid builders, mortgage lenders, planning officials, government agencies, etc., in the planning of housing programs and services.

Owner-Occupied Housing

A housing unit is owner-occupied if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. The unit also is considered owned with a mortgage if it is built on leased land and there is a mortgage on the unit. Mobile homes occupied by owners with installment loan balances also are included in this category.

Report Area	Total Occupied Housing Units	Owner-Occupied Housing Units	Percent Owner-Occupied Housing Units
Tillamook CHNA	13,071	9,747	74.57%
Clatsop County, OR	18,095	11,160	61.67%
Lincoln County, OR	22,829	16,292	71.37%
Tillamook County, OR	11,817	8,646	73.17%
Oregon	1,701,548	1,078,343	63.37%
United States	127,482,865	82,892,037	65.02%

Mental Health

Mental health is a state of well-being where individuals cope with life's challenges, work productively and contribute to their communities. This concept goes beyond the absence of mental disorders, emphasizing the capacity for resilience, emotional stability and social well-being.

Mental health is an important component of overall health and is interdependent with social determinants such as income, education, social support and access to healthcare. Mental health conditions can increase the risk of chronic health conditions such as diabetes, heart disease and stroke (National Institute of Mental Health). For instance, depression can lead to poor self-care, which exacerbates certain health conditions. Inversely, the presence of health conditions can increase the risk for mental illness as individuals with one or more chronic illnesses often experience higher levels of stress and anxiety, which can trigger mental health issues. According to the Substance Abuse and Mental Health Services Administration, 23.1% of U.S. adults (59.3 million) experienced a mental health condition in 2022. Living with a mental health condition varies in severity but can cause distress and have negative effects on one's personal, social and work life. For some, it can significantly impact their ability to carry out daily obligations.

The growing prevalence of mental health is an issue affecting many community residents. In Tillamook County, nearly one in five people (19.7%) reported having poor mental health (Centers for Disease Control and Prevention, 2022). When asked about a person's biggest health problems, a community survey

showed 11.7% of respondents selecting mental health problems, only behind aging problems and being overweight. Focus group participants noted that a wide variety of factors contribute to poor mental health, "the physical, the homelessness, the financial circumstances, all those things [...] are playing into your anxiety, your trauma, your depression." Key informants explained that access to mental health care is limited, especially for acute psychiatric and behavioral health emergencies and "we have no facilities on a large enough scale to actually treat people that are addicted or treat people that have mental health issues."

Despite increased risk factors, opportunities to address indicators of mental health do exist. Securing more resources and programming, along with sharing existing opportunities, can improve health outcomes and reduce disparities. For additional data, see the following pages.

Data Highlights

Community Voices: *exploring local perceptions, thoughts & beliefs*

“It makes us feel invisible when we’re not seen as a person, but as a disease or as an illness or as mental illness... It’s like we’re forced to wear that label and that makes us invisible to any other attributes of ourselves.”

“I think if the healthcare providers were a little bit more aware and understanding of...the physical, the homelessness, the financial circumstances, all those things play into your mental health...they [providers] don’t always take into account that those circumstances are playing into your anxiety, your trauma, your depression.”

“You lose your job, you lose your friends, you lose your social structure, and eventually you lose your housing, you lose everything. And so it just cascades, it causes mental health issues.”

“...I would say there’s a lot of great things happening. I think there’s amazing people who are getting Narcan out and distributed...but thinking about schools, we know that the scare tactics don’t work...and that there aren’t enough evidence-based programs being implemented... Administrators are having to implement so many things in schools...this feels like a crisis for a generation that if we don’t act quickly, we’re going to lose more lives...”

“...alcohol and drugs coincides with mental health. It coincides with homelessness. It’s a trifecta event.”

“In the state of Oregon, there’s a number of different ways and reasons why people end up using or overdosing from fentanyl. It’s not by choice.”

“If you go back through all of our community health needs assessments, you will find that that we have had high, high suicide rates, higher than the state of Oregon... You know, there’s a certainly a lot of factors...depression and anxiety being one of them.”

“We have no facilities on a large enough scale to actually treat people that are addicted or treat people that have mental health issues or needs. We need regional facilities... we need something where people can go...get the treatment that they need.”

Tillamook Community Health Needs Survey

When asked about the resources the community needs more of to live better,

38.8%

selected mental health related resources.

The above chart demonstrates the percentage of total references during key informant interviews and focus groups that centered around the five health need topics listed. The topics are listed in order of most referenced to least referenced community health need during conversations with community members. Please see methodology V. D. Focus Group & Key Informant Interview Methodology for more information.

The above chart depicts the reasons why key informant interviewees and focus groups selected Mental Health as a community health need.

Health Needs: Mental Health

Risk Factors - Access to Care - Medical Insurance

The lack of health insurance is considered a *key driver* of health status.

In the report area 5.07% of the total civilian non-institutionalized population are without health insurance coverage. The rate of uninsured persons in the report area is less than the state average of 6.23%. This indicator is relevant because lack of insurance is a primary barrier to healthcare access including regular primary care, specialty care, and other health services that contributes to poor health status.

Report Area	Total Population (For Whom Insurance Status is Determined)	Uninsured Population	Uninsured Population, Percent
Tillamook CHNA	29,816	1,511	5.07%
Clatsop County, OR	40,762	2,651	6.50%

Oregon	16.40%	17.90%	19.50%
United States	19.80%	24.80%	15.00%

Data Source: Centers for Disease Control and Prevention, Behavioral Risk Factor Surveillance System. Accessed via the PLACES Data Portal. 2022.

Risk Factors - Stress & Trauma - Violent Crime Rate

This indicator reports the rate of violent crime offenses reported by law enforcement per 100,000 residents. Violent crime includes homicide, rape, robbery, and aggravated assault. The data for this indicator are obtained from the 2022 County Health Rankings, which utilizes figures from the 2014 and 2016 FBI Uniform Crime Reports. This indicator is relevant because it assesses community safety.

In the report area, 37 violent crimes occurred in 2014 and 2016 (two years). The violent crime rate of 126.1 per 100,000 residents is lower than the statewide rate of 248.7 per 100,000.

Note: Data are suppressed for counties if, for both years of available data, the population reported by agencies is less than 50% of the population reported in Census or less than 80% of agencies measuring crimes reported data.

Report Area	Violent Crimes	Violent Crime Rate (Per 100,000 Pop.)
Tillamook CHNA	37	126.1
Clatsop County, OR	57	163.3
Lincoln County, OR	162	347.4
Tillamook County, OR	25	97.4
Oregon	10,027	248.7
United States	1,240,534	386.5

Risk Factors - Stress & Trauma - Unemployment

According to the most recent American Community Survey estimates, total unemployment in the report area is 601, or 4.72% of the civilian labor force. This indicator is relevant because unemployment creates financial instability and barriers to access including insurance coverage, health services, healthy food, and other necessities that contribute to poor health status.

Report Area	Labor Force	Number Unemployed	Unemployment Rate
Tillamook CHNA	12,733	601	4.72%
Clatsop County, OR	19,633	853	4.43%
Lincoln County, OR	21,448	1,693	7.91%

Health Outcomes - Anxiety & Depression - Poor Mental Health

This indicator reports the percentage of adults age 18 and older who report 14 or more days during the past 30 days during which their mental health was not good.

Within the report area, there were 17.4% of adults 18 and older who reported poor mental health in the past month of the total population age 18 and older.

Report Area	Total Population	Adults Age 18+ with Poor Mental Health (Crude)	Adults Age 18+ with Poor Mental Health (Age-Adjusted)
Tillamook CHNA	31,300	17.4%	No data
Clatsop County, OR	41,695	16.5%	18.6%
Lincoln County, OR	50,813	17.2%	20.1%
Tillamook County, OR	27,574	17.0%	19.7%
Oregon	4,240,137	18.0%	19.0%

Health Outcomes - Deaths of Despair - Suicide Mortality

This indicator reports the 2019-2023 five-year average rate of death due to intentional self-harm (suicide) per 100,000 population. Figures are reported as crude rates. Rates are resummarized for report areas from county level data, only where data is available. This indicator is relevant because suicide is an indicator of poor mental health.

Within the report area, there are a total of 50 deaths due to suicide. This represents a crude death rate of 31.7 per every 100,000 total population.

Note: Data are suppressed for counties with fewer than 20 deaths in the time frame.

Report Area	Total Population, 2018-2022 Average	Five Year Total Deaths, 2018-2022 Total	Crude Death Rate (Per 100,000 Population)
Tillamook CHNA	31,368	50	31.7
Clatsop County, OR	41,051	41	20.0
Lincoln County, OR	50,608	77	30.4
Tillamook County, OR	27,443	44	32.1
Oregon	4,235,779	4,399	20.8
United States	331,563,969	240,465	14.5

Note: This indicator is compared to the state average.

Health Outcomes - Deaths of Despair - Deaths of Despair

This indicator reports average rate of death due to intentional self-harm (suicide), alcohol-related disease, and drug overdose, also known as "deaths of despair", per 100,000 population. Figures are reported as crude rates. Rates are resummarized for report areas from county level data, only where data is available. This indicator is relevant because death of despair is an indicator of poor mental health.

Within the report area, there were 146 deaths of despair. This represents a crude death rate of 93.3 per every 100,000 total population.

Note: Data are suppressed for counties with fewer than 20 deaths in the time frame.

Report Area	Total Population, 2018-2022 Average	Five Year Total Deaths, 2018-2022 Total	Crude Death Rate (Per 100,000 Population)
Tillamook CHNA	31,368	146	93.3

From the **list** of significant health needs, Steering Committee members **identified** the following as high priorities. The remaining lower priority needs were also identified by **Steering Committee** members as important community needs to address.

A. Identified Significant Health Needs

The following lists all significant health needs identified during the 2025 CHNA process. Also included are links to resources related to each health need.

High Priority Needs

Access to Care

tillamookchc.org

In the Tillamook service area, only 13.81% of the population lives within a half mile of public transit (Environmental Protection Agency, 2021). Focus group participants and key informants noted various challenges like getting over the hill for care and not having transportation to be able to make medical appointments.

Community Infrastructure

[Tillamookcounty.gov/commdev](https://tillamookcounty.gov/commdev)

More than one in 10 households (11.01%) have slow or no internet access (U.S. Census Bureau, 2023). Key informants described that despite the increased connectivity, there are many areas where internet access is limited.

Housing

[Careinc.org](https://careinc.org)
tillamookcounty.gov/bc-hc

Based on the Area Median Income (AMI), households spend almost two-thirds (62.97%) of their income on housing and transportation alone (Partnership for Sustainable Communities, 2019). Focus group participants and key informants both mentioned how low housing inventory is a driver for high housing costs.

Mental Health

ourtillamook.org/tillamook-county-mental-health-crisis-line/
tillamookchc.org/behavioral-health/

Nearly one in five people (19.7%) reported having poor mental health (Centers for Disease Control and Prevention, 2022). Focus group participants noted that a wide variety of factors contribute to poor mental health, while key informants explained that access to mental health care is limited, especially for acute psychiatric and behavioral health emergencies.

Lower Priority Needs **please note web address leads to multiple 211 resources within each priority need*

Education

nwresd.org/Home/Components/FacilityDirectory/FacilityDirectory/111/58
oregon.gov/ode/pages/default.aspx

Focus group participants and key informants emphasized the importance of early childhood education and described how childcare programs are limited. Among children aged three to four, 36.2% are enrolled in preschool (U.S. Census Bureau, 2022).

Health Conditions

tillamookcountywellness.org/be-well

Of the population 18 and older, 31.2% of adults are obese and 13% of adults have been diagnosed with diabetes (Centers for Disease Control and Prevention, 2022). Focus group participants and key informants described noticing a correlation between high rates of diabetes and obesity, as well as an increase in youth diagnoses.

Health Risk Behaviors

ourtillamook.org/help/
tillamookchc.org/public-health/

Focus group participants and key informants emphasized how alcohol and drugs continue to be a growing crisis, along with the rise in fentanyl contamination. Among adults 18+, 16.1% of adults reported binge drinking (CDC, 2022).

Financial Stability

tillamookcountywellness.org/work-well/financial-wellness

More than one in five (20.62%) children live in households with an income below the Federal Poverty Level (U.S. Census Bureau, 2022) and the median household income is \$62,319 compared to \$76,632 in Oregon (U.S. Census Bureau, 2022).

B. Description of Focus Groups & Key Informant Interviews

The CHNA Steering Committee identified vulnerable populations and worked with local organizations to coordinate focus groups and key informant interviews to ensure that minority populations — the voices of those with chronic disease, low income and the underserved were heard. See below for more details regarding focus groups and key informant interviews. Themes and quotes from focus groups and key informant interviews are available in Section III. High Priority Health Needs.

Logistics

Seven (7) focus groups with forty-two (42) people participating. Focus groups were in-person, typically running 90 minutes.

Seven (7) key informant interviews. Interviews were conducted virtually, running 60 minutes.

Participating Organizations

- Adventist Health Tillamook
- Community Action Resource Enterprise (CARE)
- Oregon State University Extension Services
- Tillamook Bay Community College
- Tillamook School District
- Tillamook County Community Health Centers
- Tillamook County
- Tillamook County Family Counseling Center
- Tillamook Transportation District
- Worksource Oregon (Oregon Employment Dept)
- YMCA

Represented Race/Ethnicity

- LatinX
- Multi-Race
- White

Represented Populations

- Healthcare Consumer
- Healthcare Workfoce
- Low-income
- Medically Underserved
- Minority Population
- Older Adults
- Persons with Disability
- Public Health
- Substance Use Disorder
- Youth

C. Focus Groups & Key Informant Interviews Results

The focus group and key informant interview charts below highlight the percentage of mentions for each selected need within the Community Impact Framework. For additional details on focus group and key informant interview methodology, see Section V. Process and Methods to Conduct the CHNA.

Focus Groups

The following chart details the percentage by which focus group participants mentioned or discussed the 12 categories from our Community Impact Framework.

Key Informant Interviews

The following chart details the percentage by which key informant interviews mentioned or discussed the 12 categories from our Community Impact Framework.

D. Secondary Data Results

Below are the secondary data results that rank the 12 categories from our Community Impact Framework from 1 to 100. Higher scores have the greatest impact on life expectancy and general health status. For additional information on scoring methodology see Section V. Process and Methods to Conduct the CHNA.

Priority Health Needs

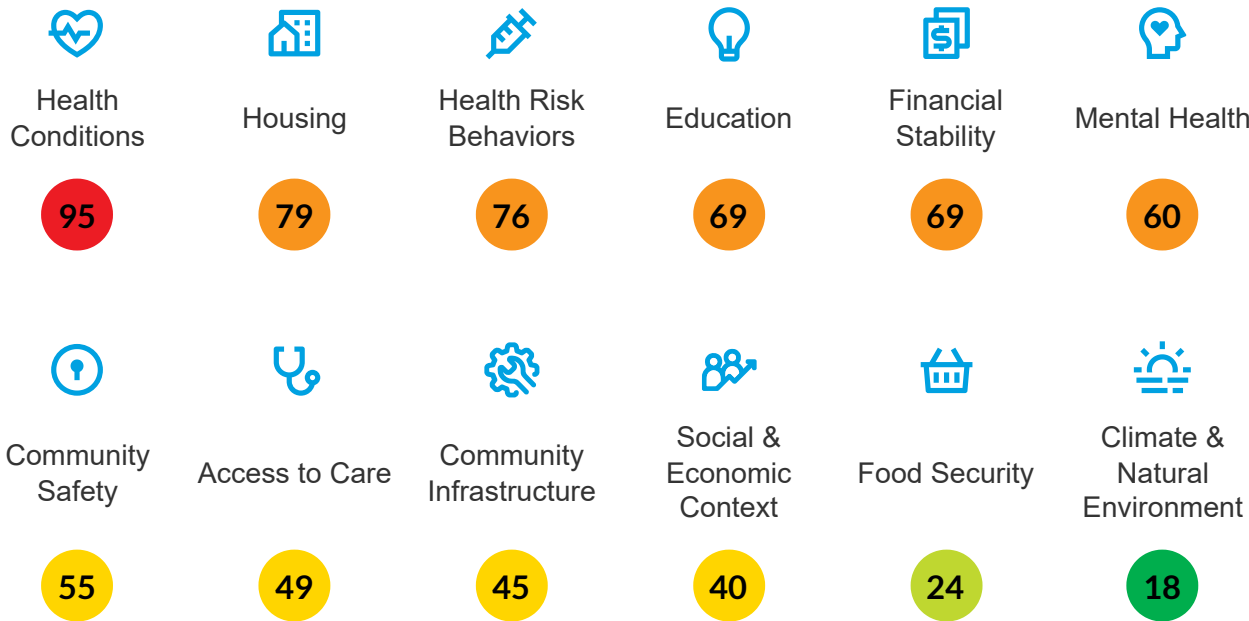

Health needs in Tillamook CHNA were determined using quantitative analysis of data. Needs were identified based on their impact on short-term health (well-being) and long-term health (life expectancy), as well as prevalence in the market relative to state benchmarks. Priority areas are **scored** on a scale of 1 to 100, with higher scores indicating higher health needs.

Adults Age 18+ with Poor or Fair General Health (Crude)
20.9%
Oregon: 18.4%

Life Expectancy at Birth (2010-2015)
78.31
Oregon: 79.22

Legend: ● Excellent ● Very Good ● Good ● Fair ● Poor

E. Survey Results

Community surveys collect data from a broad population to understand real-time perspectives on health and well-being. Survey questions focus on gathering data related to major health issues, life satisfaction, access to medical care and community resources.

Imagine a 10-step ladder. At the top life is great, a 10. At the bottom, life is not good, a 0. Which step of the ladder are you standing on right now?

Would you say that in general your health is

Select 3-5 things that you believe make it hard to live and be well in this community.

High cost of living	20.2%
Lack of affordable housing	16.5%
Limited affordable healthy food	10.6%
Can't get medical care	9.8%
Not enough good jobs	9.3%
Limited childcare options	6.7%
Lack of transportation	5.7%
Unsafe community	4.9%
No friends or connection to community	4.9%
High risk for natural disasters (fire, floods, earthquakes)	4.7%
Limited access to social services for me or my family members	3.1%
Lack of good schools	2.1%
Bad air and/or water quality	1.6%
Grand Total	100.0%

Select 1-5 of the biggest health problems you're facing.

Aging problems (e.g. arthritis, hearing/vision loss, dementia, etc.)	32.5%
Being overweight	13.2%
Mental health problems (e.g. extreme sadness, fear, worry, anger or stress)	11.7%
High blood pressure	8.1%
Poor eating habits	7.7%
Alcohol and/or drug misuse	7.1%
Teeth problems	7.1%
Diabetes	4.4%
Asthma/COPD	2.5%
Cancer	2.0%
Heart disease/Stroke	1.7%
Respiratory/Lung Diseases	0.9%
Child Abuse	0.5%

and **methods** used to
conduct this CHNA.

V. Process & Methods to Conduct the CHNA

A. Introduction

This Community Health Needs Assessment (CHNA) process aligns with the American Hospital Association Community Health Improvement (i.e. Healthy Communities) guidelines and was designed after an analysis of best practices for CHNAs, as defined by the Centers for Disease Control and Prevention (CDC), Community Commons, and the National Association of County & City Health Officials (NACCHO).

This CHNA was conducted using four distinct sources of primary and secondary data. This mixed methods approach is a preferred practice for needs assessments as it allows for data triangulation, providing the greatest understanding of community needs from the broadest range of perspectives. Having multiple avenues for contributing perspectives has been shown to better include the voices of all community members, particularly vulnerable and disadvantaged groups (Ravaghi et al., 2023).

For this CHNA process, a local Steering Committee was formed to help coordinate the collection of primary data, with an emphasis on incorporating the perspectives of underserved populations. Primary data collection involved focus group interviews, individual key informant interviews and surveys. Secondary data was also collected, involving a review of over 150 metrics from state and national sources which were analyzed to determine factors having the greatest impact on community health. All collected CHNA data was coded and analyzed according to a Community Impact Framework. Framework development, data types, data collection, analysis and prioritization methods are described in the following pages.

B. Community Impact Framework

To organize health findings throughout this CHNA, a multi-tiered Community Impact Framework was used to categorize data into community health needs. To develop the Community Impact Framework, an initial set of 12 conceptual health need areas were identified by reviewing an analysis of past cycle CHNAs, which was conducted by the American Hospital Association, and comparing to existing SDoH frameworks like Well-Being in the Nation (WIN) and Kaiser Family Foundation. After conducting an analysis of appropriate and available public, secondary data to measure each category, a set of sub-categories and subsequent indicators were codified to make up a systematic framework. To this end, a landscape scan of available data was performed by evaluating existing population health measurement frameworks. Four primary frameworks were evaluated:

- Well-Being in the Nation (WIN) Measurement Framework
- National Committee for Vital and Health Statistics (NCVHS) Measurement Framework for Community Health & Well Being
- County Health Rankings and Roadmaps
- Healthy People 2030 Leading Health Indicators

Attributes for each indicator within the frameworks were identified, including data source, geographic level, extent, time period and update frequency. Next, indicators were filtered and removed from the list based on our inclusion criteria: ability to represent the reference community (e.g., geographic scale), recency, update frequency and source reliability. Indicators from each framework were assigned to each of the 12 categories, with some indicators assigned to multiple categories. The final framework consists of more than 150 individual metrics across the 12 categories, each with a minimum of two subcategories (CARES, 2022). For a full glossary of terms that include all 12 categories, see Appendix A. Glossary of Terms and Definitions of Health Needs.

Health Needs	Access to Care	Availability - Hospitals & Clinics Availability - Mental Health Care Availability - Primary Care Availability - Specialty Care Barriers - Health Literacy Barriers - Medical Insurance Barriers - Transportation

C. Data Overview: Description, Benefits & Limitations

The below information includes context related to each data source, to aid interpretation of the data included in the following sections.

Description

Key Informant Interviews

Qualitative data from semi-structured conversations with community leaders who possess specialized knowledge about a particular community. Key informants are selected based on their firsthand experience, expertise, or position within a specific community.

Focus Group

Qualitative data from structured, but fluid discussions led by a facilitator with a small group of community members who reside in that local area. Participants are chosen for their ability to represent the needs of underrepresented, underserved, or vulnerable populations within the community.

Survey

Quantitative data collected in real time for this report, representing health concerns and priorities across a broad sample of the community and patients. The survey consists of questions related to health status, health needs and resources available to the community.

Secondary Public Data

Quantitative data previously collected by government agencies, research institutions, or other organizations. This report references a pool of 150 data indicators curated by the University of Missouri Extension Center for Applied Research and Engagement Systems (CARES).

Benefits

Key Informant Interviews

- **In-depth Insight:** These interviews are designed to gather in-depth insights, perspectives and expertise that may not be readily available through other sources.
- **Contextual Understanding:** The information gathered helps our organization gain an understanding of complex health barriers and sociocultural contexts beyond what is available in quantitative data.
- **Validation:** Conducting key informant interviews can serve as a means of validating other data sources.
- **Community Engagement:** Supports collaborative efforts to address community health needs.

Focus Group

- **Interactive and In-depth Insights:** Community members are encouraged to interact with each other, which provides insights and generates discussion that uncover a range of needs and perspectives. Focus groups encourage participants to build on each other's responses, leading to richer, more detailed insights.
- **Contextual Understanding:** The information gathered helps our organization gain an understanding of complex health barriers and sociocultural contexts beyond what is available in quantitative data.
- **Validation:** Conducting focus groups can serve as a means of validating other data sources.
- **Community Engagement:** Supports collaborative efforts to address community health needs. We prioritized engaging underrepresented individuals who face negative socioeconomic or health effects, such as low-income populations, minorities and those with chronic health conditions.

Survey

- **Full Anonymity:** Personally identifiable information is not collected.
- **Wide Reach and Generalizability:** Data from a large number of respondents makes it possible to generalize findings to a larger community.
- **Cost-Effectiveness:** Surveys can be a relatively cost-effective method for reaching a large audience.

Secondary Public Data

- **Public Data:** Data is publicly available and therefore a cost-effective method for assessing health needs.
- **Diverse and Longitudinal Data:** The data includes a diverse set of 150 metrics spanning census data, economic indicators, and health statistics and publicly released survey results, allowing for the ability to conduct comparative analyses over time.
- **Wide Reach and Generalizability:** Data from a large number of respondents makes it possible to generalize findings to a larger community.

Limitations

Key Informant Interviews

- **Subjectivity and Perspective Bias:** Key informants who volunteer to participate may have their own biases or limited perspectives, which can shape their responses.
- **Limited Generalizability:** Informants may lack generalizability to the broader community since informants are selected based on involvement in specific area.

Focus Group

- **Limited Generalizability:** Findings from focus groups may not be broadly representative of the entire community due to the small sample size of volunteers.
- **Social Desirability Bias:** Participants may provide responses that they perceive as socially desirable or acceptable in a group setting, rather than fully disclosing less favorable or controversial information.

Survey

- **Sampling Bias:** Community members who choose to complete the survey may have their own biases or limited perspectives, which can shape their responses.

- **Distribution and Data Collection:** Surveys distributed digitally used a global online translation service, which may present challenges with the quality of understanding cultural nuances and word-for-word translation. Surveys were also distributed in paper form to local organizations who entered results from their constituents, which could affect the accuracy of the information collected.
- **Limited Depth of Responses:** Limited opportunity for participants to elaborate on their answers or provide context can result in responses that do not fully capture the complexities of health barriers.

Secondary Public Data

- **Timeliness:** The most recent public data that met our criteria (available across multiple states and, when possible, at the zip code level) was referenced. However, public data may not always be up-to-date or reflect real-time information.

D. Focus Group & Key Informant Interview Methodology

Primary data collection was designed to gather first-person input on community health needs directly from community members. From May 2024 – November 2024, focus groups were conducted with community service providers and service recipients, and key informant interviews were conducted with community leaders. Focus group members participated in 1.5-hour in-person sessions, and key informant interviewees participated in 1-hour individual virtual interviews. Steering committee members were responsible for identifying participants and scheduling both types of interviews. Any social service provider in the community was eligible for inclusion in the focus groups, and any social service director or other community leader was eligible for key informant interview involvement. An emphasis was placed on hearing from underserved and minority populations whenever possible.

The semi-structured interview guides used for both types of interviews were nearly identical. The only variation between the focus group and key informant interview guides was the inclusion of additional prompting questions allowing for key informants to provide a greater depth of response.

The facilitators were a team of Adventist Health system staff who began all focus groups and key informant interviews by having participants identify up to five high priority community health needs from their perspective based on a social determinants of health framework with priority areas and subcategories. The facilitators then moved through a series of questions, focusing on depth of need, barriers, attempts at addressing the need historically, ways that different groups are affected and recent, emerging trends. Focus groups and key informant interviews were conducted in teams of two, with a lead facilitator and a notetaker, and all interviews were recorded. All focus groups were conducted in English or Spanish, with translation services provided as needed. Focus groups and key informant interviews were recorded with the consent of participating interviewees. All recordings were transcribed into English. In the spirit of collaboration, transcripts were shared with other non-profit hospitals within the same service area. To ensure the anonymity of participants was protected, all shared transcripts removed participant names. Remarks that detracted from the scope pertaining to community health needs were also removed.

E. Survey Methodology

A community survey was distributed as a primary data tool to gather real-time, quantitative data about the community's greatest health needs. To reflect the entire community, questions were designed to solicit responses at the individual, interpersonal and community levels. The selection process and criteria for the survey questions involved a rigorous review of other health systems' CHNAs, reputable government organizations such as the National Association of County and City Health Officials (NACCHO), the Centers for Medicare and Medicaid Services (CMS) Health-Related Social Needs Screening Tool, Healthy People 2030, and the Centers for Disease Control and Prevention (CDC). Additionally, the survey design was informed by interviewing techniques, collaboration with Steering Committee members from our previous CHNA cycle, a review of community health improvement toolkits, and the availability of state and national benchmarks.

The community survey comprised seven questions and took approximately five minutes to complete. To ensure accessibility, the questions were written at a fifth-grade reading level and translated into four languages using a global online translation service. The survey was distributed both in paper form and digitally via link, email, text, and QR code. Participation was voluntary, and responses were kept confidential. To maximize reach within the service area, the survey was shared with Steering Committee members, who then distributed it among their stakeholders, community-based organizations that volunteered to share it with their constituents, and patients at Adventist Health hospitals. For the full list of survey questions, see Appendix C.

F. Secondary Data Methodology

Basic Approach

Secondary data scoring comprised development of health needs index scores for each of the 12 categories included in the Community Impact framework. These index scores were determined using quantitative analysis of all secondary data referenced. Health needs scores for target communities in each of 12 priority areas (categories) were determined using quantitative analysis of secondary data from standard, national sources. First, metrics were selected that best represented each category based on a review of multiple health measurement frameworks. Next, metrics were scored based on three criteria relevant to life expectancy and quality of life. These criteria include impact on short-term health (well-being), impact on long-term health (life expectancy) and severity within the reference community relative to state benchmarks. Final health needs scores for each priority area were developed with possible scores ranging from 1 to 100. Higher health needs scores indicate 1) a comparatively high degree of correlation between the underlying metrics within the health needs category and the outcome variables (well-being and life expectancy), and 2) a high level of need in the community compared to other areas of the state. Figure 1 depicts this process, which is further described below.

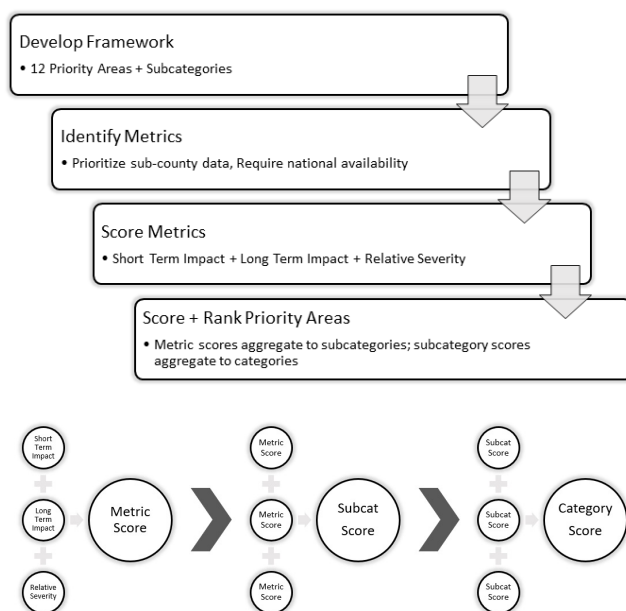

Figure 1. A. Approach to framework and scoring methodology development. B. Diagram of scoring approach.

Metric Scoring

Scores are generated for metrics (e.g., obesity prevalence) to represent the criteria mentioned above (length of life, quality of life and severity). To operationalize the first two criteria, we measure the degree of correlation between each metric and two outcome variables: a short-term goal (well-being, measured by physical and mental health status) and a long-term goal (length of life, measured by life expectancy at birth).

Metrics with strong negative relationships with the outcome variables (scoring below -.40) were removed from the framework.

To address the third criterion, we calculate the relative severity of each metric for each target community using a z-score. A z-score is a measure which quantifies the position of a raw data value (e.g., the value for one metric for a community) in relationship to the mean and distribution of all values (e.g., the value for one metric for all other areas). For this work, the calculated value for each community for a metric (e.g., obesity) is compared against the value for all counties within the community state (e.g., obesity rates for all counties in California). In this way, communities can be compared against geographic areas with similar geographic size and heterogeneity. Furthermore, z-scores for a given community are compared against a fixed number and definition of geographic areas, which exist independent of the number of communities or hospitals assessed within a state.

Transformation of Correlation Scores

To aid in interpretability, correlation scores within a single health need category and outcome category were converted to percentiles, such that the score for a single metric represents the percent of the total scores for all metrics.

Category Scores

Scores for each metric are based on three separate values, as represented in Equation 1 below. Short-term and long-term health impact scores are identical for all communities, while the relative severity score is unique. To generate a final score for each metric, we calculate the weighted average of the short-term and long-term

score and apply the z-score as an adjustment factor.

$$M_c = (ST_s + LT_s) * Z_{cs}$$

Equation 1. Metric scores. ST_s is the state-specific correlation score between the metric and the short term outcome variable (self-reported health status), LT_s is the state-specific correlation score between the metric and the long term outcome variable (life expectancy), and Z_{cs} is the area-specific relative severity score (z-score).

In this way, communities that perform better than average for a metric will see scores adjusted down (lower priority), and communities that perform worse than average will see scores adjusted up (higher priority).

Next, metric scores are aggregated to produce subcategory and category scores. Subcategory scores are calculated as the average of all final metric scores within a category. Finally, category scores are calculated as the average of all subcategory scores within a category.

$$SubC_c = \sum_c SubC/n$$

$$Cat_c = \sum SubC/n$$

Presentation of Results

All final subcategory and category scores are transformed to a 100-point scale for ease of interpretation, where 100 is the maximum possible value (highest priority) and one is the lowest theoretical possible value (lowest priority).

Subcategory scores are transformed *independently* of category scores. The maximum “real” subcategory score may be as high as 7.0, which would transform to ~100, whereas the highest category score is only about 4.0, which also transforms to ~100. Therefore, subcategory scores can be compared with other subcategory scores; category scores may be compared with category scores, however subcategory scores and category scores cannot be compared.

Limitations

This approach is subject to several limitations. First, the final selection of priority areas is heavily dependent on the structure of the measurement framework. In this work, the top-level framework was determined by the hospital system based on prior assessments; metrics were assigned to categories and grouped based on expert knowledge. However, changes to the organization of metrics within top-level categories, including the addition or removal of metrics or the reorganization of metrics within subcategories, are a

major driver of category scores and results. A data-driven method for selecting a measurement framework would therefore improve the applicability of these results outside of the example health system.

Next, despite best efforts to identify relevant metrics at the community level, availability of data to represent some priority health need concepts remain limited. For example, data on the prevalence of overall homelessness is not available for small (e.g., sub-county) geographic areas. Without data that accurately represent prevalence within a community, the ability to score impact on health and well-being is limited.

An additional limitation is the flexibility of metric correlation scores with the outcome variables. Work found scores to be influenced by the geographic scale and the geographic universe (e.g., state, region, or U.S. total) at which relationships were assessed, and rescaling methods used to standardize data. Changes to one or more of these decisions produce a range of correlation scores. Ideally, relationships would be consistent across multiple geographic levels or groupings.

Finally, secondary data are hampered by lag in reporting. At the time assessments were performed (summer 2024), the latest available data on health behaviors, outcomes, and social determinants represented the 2021 and 2022 calendar years, and in some cases, data were older still. Since the first aim of this work is to measure the relationship between certain factors and well-being and life expectancy, this temporal lag is of less importance. Moreover, we incorporate a mix of other data sources to mitigate the data lag variance to take a standardized approach important for a mixed-methodology analysis.

G. Data Analysis & Identification of Significant Health Needs

This CHNA deployed a mixed methodology combining the strengths of analyzing primary data with secondary data results. As demonstrated in steps two–four below, several actions were taken to analyze data and produce a list of significant health needs.

Preparation & Data Collection: Adventist Health staff, CARES team and CHNA Steering Committee

STEP 1: FRAMEWORK & CODEBOOK CREATION

- Map focus group and key informant interview questions to framework and codebook.
- Map secondary data indicators to framework.

STEP 2: DATA COLLECTION

- Primary Data: focus groups, key informant interviews and survey.
- Secondary Data: 150 indicators.

Data Analysis & Identification of Significant Health Needs: Adventist Health system staff and CARES team

STEP 3: AGGREGATION

- Code focus group and key informant interview groups to framework.
- Aggregate survey results per community.
- Score Secondary Data Index.

STEP 4: SYNTHESIS

- Identify list of Significant Health Needs based on:
 - Health need identified as top five across any data sources.
 - Health need is identified in two or more data sources.

EVALUATION & HEALTH NEEDS PRIORITIZATION: CHNA Steering Committee

STEP 5: EVALUATION

- Evaluate Significant Health Needs data.

STEP 6: PRIORITIZATION

- Rank “high” and “low” Priority Health Needs based on prioritization criteria.

Data Collection to Aggregation

After primary data collection, Adventist Health staff conducted a deductive coding of all focus group and key informant interview data to the Community Impact framework. Secondary public data was analyzed and index scores were created for ranking, according to the methodology outlined in Section V. Process and Methods to Conduct the CHNA.

To facilitate this coding process for focus groups and key informant interviews, as described in Step 3 of the infographic above, focus group and key informant interview transcript files were uploaded to a Microsoft AI coding solution, along with the Community Impact framework as the reference table. To generate an output, Adventist Health staff provided a written prompt to the AI solution:

You are an AI assistant tasked with analyzing and classifying provided conversational text from

interviews conducted with community members regarding what they see as the top health needs in their community. The topics are related to Public Health and Social Determinants of Health (SDOH).

*Each piece of text (or excerpt) relevant to a public health need and/or social determinants of health should be classified into **all applicable** provided SDOH categories, at either the “subcategory” or “codename” levels using the following SDOH reference table: {reference table}.*

For each input text, your goal is:

*1. Identify **all relevant** (either directly or implied) SDOH-related excerpts from the provided text, based on the reference table. Use the excerpt examples, Subcategory and/or Codename Description, and code names from the SDOH reference table to assist in identifying which excerpts are relevant.*

2. Classify the excerpt under the appropriate SDOH categories. Include the entire excerpt text with accompanying context to illustrate how it corresponds with each classified category. If an excerpt cannot be coded to the code and codename level based on the reference table, use the most appropriate subcategory and leave code and codename blank. Excerpts must have two or more sentences. Excerpts must be relevant (direct or implied) to the current health needs/problems in the speaker's community.

3. ****For each classification, assign a confidence score between 0 and 1, where 1 indicates the highest confidence.****

The output was a CSV file with a list of excerpts that were coded to the category and subcategory levels of the Community Impact framework. These category and subcategory references were counted, and a percentage of excerpts coded to each category was generated to establish a ranking of top health need categories for focus groups and key informant interviews.

Data Synthesis and Identification of Significant Health Needs

Staff conducted axial coding by drawing connections between the top health needs across focus groups, key informant interviews and secondary public data. Adventist Health system staff produced a list of significant health needs and presented findings to CHNA Steering Committee, based on the following criteria:

- The health need comes up as a top five for at least one data source.
- The health need is referenced across at least two data sources.
- The health need as represented in the Community Impact framework corresponds with two or more secondary data indicators that perform worse than the CA state benchmark.

In addition to the list of significant health needs and the supporting data from axial coding of focus groups, key informant interviews and secondary public data, survey data was provided to CHNA Steering Committee for evaluation and corroboration before prioritization of significant health needs.

H. Criteria & Process Used for Identification & Prioritization of Health Need

Prioritized Criteria

The local Steering Committee was responsible for identifying and prioritizing the community health needs included in the CHNA. Steering Committee members are community stakeholders who lead and represent sectors such as local government, community-based organizations, health and human services, schools, public health and others. To facilitate the process of prioritizing health needs, Adventist Health system staff led a series of meetings held in each community to 1) present the results of the CHNA data collection process and 2) prioritize the significant identified health needs.

Prioritization Process and Selection of High Priority Needs

Following the identification of significant health needs through the analysis process, Adventist Health system staff conducted a 90-minute presentation to the Steering Committee, revealing primary and secondary data findings that led to the identification of these needs. During the presentation, staff emphasized the top five needs from each data source and the

supporting data that justified their inclusion. After the data reveal meeting, Steering Committee members were provided with three prioritization tools, the presentation slides, and a secondary data report for review and discussion with organizational leadership. Additionally, members participated in a poll to identify the three to five needs they considered most critical, utilizing relevant local data sources as available.

The second part of the series involved a prioritization meeting aimed at building consensus around the community health needs identified as most critical by Steering Committee members. Steering Committee members, along with their staff, boards, and constituencies, reviewed and discussed the top five needs from each data source. They then voted to select priorities that demonstrated the greatest need based on severity and prevalence, alignment with common goals, feasibility of potential interventions, and opportunities to maximize available resources over a three-year period. The meeting concluded with committee members prioritizing the list of significant identified needs, typically selecting two to four as high-priority. See Appendix D for prioritization tools used.

I. Written Comments for 2025 CHNA

We value your input on our community health needs assessment and invite you to submit comments on this CHNA to community.benefit@ah.org. At the time of this CHNA report development, no written comments about the previous CHNA report or adopted implementation strategy were received.

J. CHNA Team Used to Conduct the Assessment

The Adventist Health Community Impact Team coordinates Community Health Needs Assessments for many of the communities we serve. The Community Impact Team convened community experts within each service area's steering committee, coordinated and/or conducted primary data collection, facilitated analysis, and wrote the report content. Team members listed below have diverse and relevant experience in healthcare, philanthropy, government, Medicaid managed care and quality improvement, public health, community health and community benefit reporting. Those team members include:

Amanjit 'Amy' Lasher

Administrative Director, Community Integration

Sarah Clair, MPA

Manager, Public Affairs

Mitchell Iwahiro, MS

Project Manager, Community Integration

Susan Passalacqua

Manager, Community Benefit Compliance

Lisa Wegley

Program Manager, Community Benefits Operations

Additionally, Adventist Health system staff supported the data collection and analysis portion of the report:

Matt Gonzales

Salesforce Administrator

Alex McFadyen, PMP

Manager, Consumer Digital Products

Philip Stanley

Digital Marketing Manager

Aldreen Venzon, Ph.D, MS, RN

Sr. Performance Analyst (System)

Cambria Wheeler

Director, Brand Engagement

CARES

Founded in 1992, the University of Missouri Extension Center for Applied Research and Engagement Systems (CARES) develops and supports mapping, reporting and collaboration systems that enable public, private and nonprofit sector organizations to effectively address issues across topics like agriculture, environment, business, community, health, safety and youth. The CARES team integrates data, mapping, visualizations and engagement tools to better serve communities and regions across the United States, including vulnerable, rural and underserved populations. CARES' web-based technologies help organizations and policy makers make more informed decisions about access, address issues of equity and support the allocation of public and private resources.

CARES staff has background in data science, Geographic Information System (GIS), database and geodatabase management, web design and user experience (UX), spatial analysis, programming, systems implementation and administration and web-based content management. Additionally, CARES holds expertise in project management, user training and support, data documentation and client design sessions that directly supports a wide variety of projects.

Angela Johnson, MPH

VI. APPROVAL PAGE

This Community Health Needs Assessment was adopted on September 18, 2025 by the Adventist Health System/West Board of Directors. The final report was made widely available to the public on December 31, 2025.

Thank you for reviewing our 2025 Community Health Needs Assessment. We are proud to serve our local community and are committed to making it a healthier place for all.

Eric Swanson
President

1000 Third Street
Tillamook, OR 97141

Appendix:

A. Glossary of Terms & Definitions of Health Needs

In 2020, Adventist Health analyzed the top priorities from 2019 CHNAs across all hospitals, compared these priorities against language from CHNAs across the country, and created a set of standard nomenclature categories to promote common language, referred elsewhere in this report as “Community Impact Framework”. Below is a list of these categories, organized according to this framework, with the accompanying definitions. These categories and definitions are drafted based on context summarized from public health literature, community CHNAs, and national and multi-national healthcare organizations. Sources for definitions are listed below.

Access to Care

Access to care refers to the timely use of personal health services to achieve the best health outcomes. This concept encompasses the availability, affordability and appropriateness of healthcare services, as well as the accessibility of these services to all individuals, regardless of income, location or social standing. Access to care directly affects population health, influencing rates of preventable diseases, overall mortality and quality of life. Ensuring equitable access to healthcare is a central public health goal, particularly in reducing health disparities among underserved populations.

Context/Source

Healthy People 2030. “Health Care Access and Quality”
World Health Organization (WHO). “Access to Care and Financial Protection”
Agency for Healthcare Research and Quality (AHRQ). “Access to Health Care”

Climate & Natural Environment

Climate and natural environment refers to the weather patterns, ecosystems and environmental conditions that impact the health of a community. This includes factors such as air and water quality, temperature extremes, green spaces and the frequency of natural disasters. These environmental elements shape health outcomes directly by influencing respiratory health, heat-related illnesses and exposure to pollutants, and indirectly through their effects on food security, housing stability and economic opportunities, all of which are crucial social determinants of health.

Climate change and environmental degradation can exacerbate existing health disparities, disproportionately affecting low-income communities and communities of color. Public health strategies aimed at addressing climate and environmental challenges focus on building climate resilience, reducing exposure to environmental hazards, and ensuring equitable access to resources like clean air, water and green spaces. By mitigating

these environmental health risks and prioritizing sustainable practices, communities can improve both immediate health outcomes and long-term resilience in the face of climate-related impacts.

Context/Source

World Health Organization. “Climate”
National Institute of Environmental Health Sciences. “Climate Change and Human Health”
Centers for Disease Control and Prevention (CDC). “Climate and Health”

Community Infrastructure

Community infrastructure refers to the physical and organizational structures that support and enhance the health, safety and well-being of residents. This includes essential elements that people rely on every day such as transportation systems, internet access, healthcare facilities, schools, parks and water and sanitation systems. When community infrastructure is accessible, safe, and well-maintained, it supports healthier living conditions, reduces health disparities and promotes social determinants of health, such as stable housing, employment opportunities and environmental quality.

Community infrastructure is a foundation for equitable access to services and resources for a healthy lifestyle and to prevent disease. Investments in infrastructure that prioritize public health — like creating walkable neighborhoods, expanding green spaces and ensuring clean drinking water — can reduce chronic illnesses, improve mental health and enhance social connections within a community.

Context/Source

Robert Wood Johnson Foundation. “Infrastructure is Public Health”
American Public Health Association. “Strengthen Public Health Infrastructure and Capacity”

Community Safety

In public health, community safety refers to the protection and well-being of individuals in a community, reducing exposure to violence, crime, environmental hazards and other risks that impact physical and mental health. Within CHNAs, community safety is examined as a determinant of health, affecting overall quality of life and contributing to disparities in health outcomes. Ensuring community safety is seen as essential for fostering environments where individuals can thrive without fear of harm. Community safety includes violence prevention, traffic safety, safe public spaces and youth engagement.

Context/Source

Centers for Disease Control and Prevention (CDC). "About Violence Prevention"

Centers for Disease Control and Prevention (CDC). "About The Public Health Approach to Violence Prevention"

Education

Education refers to the access to quality learning opportunities that shape individuals' knowledge, skills and abilities, impacting their health and well-being. Education is a key social determinant of health because it influences health behaviors, employment opportunities and economic stability. Higher levels of education are associated with better health outcomes, including lower rates of chronic diseases, longer life expectancy and improved mental health. The link between education and health is also seen in the ability to access and understand healthcare information, which can affect decisions about diet, physical activity and preventive care.

Context/Source

American Public Health Association. "Education Health"

Centers for Disease Control and Prevention (CDC). "Education Access and Quality"

Robert Wood Johnson Foundation. "Why Education Matters to Health"

Financial Stability

Financial stability refers to having a reliable and sufficient income to meet basic needs such as housing, food, healthcare and transportation. Financial stability is a critical social determinant of health, as individuals with steady income are more likely to access preventive care, afford nutritious food and maintain safe living conditions. Financial instability and poverty are linked to higher rates of chronic disease, mental health issues and reduced life expectancy due to limited access to health resources and higher exposure to stressors.

Context/Source

Centers for Disease Control and Prevention (CDC). "Economic Stability"

Food Security

Food security refers to consistent access to sufficient, safe, and nutritious food that meets the dietary needs necessary for a healthy life. Access to healthy food is fundamental to preventing malnutrition, obesity and chronic diseases such as diabetes and heart disease. When individuals and families have reliable access to affordable, nutritious food, their overall health outcomes and quality of life improve significantly. Food insecurity, or lack of reliable access to adequate food, disproportionately impacts low-income communities and contributes to health disparities. Public health efforts to improve food security often involve enhancing access to grocery stores, farmers' markets and community gardens, as well as supporting programs like the Supplemental Nutrition Assistance Program (SNAP). By addressing Food Security, public health initiatives aim to reduce health inequities, support economic stability and foster healthier communities.

Context/Source

World Health Organization. "Food Safety"

Centers for Disease Control and Prevention (CDC). "Diabetes and Food Insecurity"

American Public Health Association. "Food and Nutrition"

Health Conditions

Chronic health conditions are defined as long-lasting illnesses that persist for at least one year and require ongoing medical attention, lifestyle adjustments, or both. These conditions include heart disease, diabetes, cancer and chronic respiratory diseases, which are among the leading causes of death and disability worldwide. In the context of CHNAs, identifying and addressing chronic health conditions is crucial for understanding the health status of a population and guiding targeted interventions. Communities with the highest prevalence of chronic health conditions also typically face social, economic and environmental barriers that challenge prevention and management of the chronic condition, requiring interventions that focus on the complex interplay of behavioral and environmental factors described in this framework.

Context/Source

Centers for Disease Control and Prevention (CDC). "About Chronic Diseases"

World Health Organization (WHO). "Noncommunicable Diseases"

Centers for Disease Control and Prevention (CDC). "Chronic Disease Prevalence in the US: Sociodemographic and Geographic Variations by Zip Code Tabulation Area"

Health Risk Behaviors

Health risk behaviors are actions that increase the likelihood of adverse health outcomes, such as chronic disease, injury or premature death. Common examples include tobacco use, excessive alcohol consumption, physical inactivity, poor diet and risky sexual behaviors. These behaviors are significant focus areas for public health interventions because they are preventable and have broad implications for community health costs, healthcare systems and individual well-being. By identifying and targeting health risk behaviors, public health professionals aim to reduce the prevalence of diseases like heart disease, diabetes and certain cancers, promoting healthier, longer lives for populations.

For CHNAs, health risk behaviors are viewed within the context of social determinants of health, like access to resources, socioeconomic status and educational opportunities. Addressing these behaviors involves considering the social and environmental factors that make certain populations more vulnerable, such as limited access to healthy foods or safe recreational spaces. Community health approaches often implement evidence-based interventions that are culturally tailored and community-specific, recognizing that sustainable behavior change requires supportive environments and policies that mitigate risk factors and empower communities to adopt healthier lifestyles.

Housing

Housing refers to the availability, affordability, quality and stability of living environments. Safe, stable and affordable housing directly influences health outcomes by providing protection from physical hazards, reducing stress and enabling access to essential services. Poor housing conditions, such as overcrowding, exposure to pollutants and inadequate heating or cooling can lead to respiratory illnesses, injury risks and worsened mental health, especially among vulnerable populations.

Housing instability, including frequent moves, homelessness and the risk of eviction, contributes to health disparities by limiting access to consistent healthcare, educational opportunities and community resources.

Mental Health

Mental health, within public health and community health frameworks, is understood as a state of well-being in which individuals can cope with life's challenges, work productively, and contribute meaningfully to their communities. This concept goes beyond the absence of mental disorders, emphasizing the capacity for resilience, emotional stability and fulfilling social connections. In public health, mental health is integral to overall health and is recognized as a critical factor influencing quality of life and socio-economic productivity, with both individual and social implications.

In the context of CHNAs, mental health is seen as interdependent with social determinants like income, education, social support, and access to healthcare. Health equity approaches prioritize the mental health of underserved communities, focusing on reducing stigma, expanding culturally appropriate services and advocating for policies that remove barriers to mental health resources. This framework recognizes that improving mental health outcomes requires collective action, community engagement and tailored support strategies that reflect the unique needs and values of diverse communities.

Social & Economic Context

Social and economic context in this report refers to specific social and economic aspects of an environment that can influence health and well-being of a population—place attachment, civic engagement, social inclusion, and economic vitality. Economic stability and supportive social conditions promote healthier lifestyles, reduce stress and improve access to healthcare, positively impacting health outcomes for individuals and communities.

Social and economic contexts are closely linked to health disparities, as individuals from lower-income or underserved backgrounds often face barriers to achieving home ownership, contributing to economic health, and participating in activities which support social inclusion.

B. Activity Explanation: Focus Groups & Key Informant Interviews

- ▶ We're going to do a brief exercise to start that will tell us the biggest problems you see related to your and your community's health needs.
 - Then we'll ask you questions about those problems.
 - As you look around the room you'll see three (3) posters on the wall.
 - They show photos of common problems people face, many of them related to health.
 - Please take a few minutes to vote using the five (5) stickers you were given when you walked in.
- ▶ Place a sticker underneath the photo that shows problems that you think are the biggest difficulties in your community.
- ▶ You can't use all your stickers under one photo but you can use them all in one poster.
- ▶ Which of these things causes the most problems for you or others who live here?
- ▶ We're interested in learning about things that make it hard for you, your family and friends to have good physical and mental health, and a good quality of life.
 - Some of the descriptions are one word and really meant for you to share more with us.
 - We'll give you 10 minutes to walk around.

Tallying, Engaging & Asking Questions:

- ▶ For focus groups, visually tally the votes and clearly call out the top five issues that were identified for the note-taker and audience to hear.
- ▶ Spend around 15 minutes going through questions and the topic-specific follow-up questions.
- ▶ Repeat for as many problems as time allows, leaving five or so minutes to wrap-up at the end.
- ▶ Use the same "Prompting Questions" for each of the five identified issues.

ACTIVITY EXPLANATION – Key Informant Interviews

- ▶ We're going to do a brief exercise to start that will tell us what the biggest problems you see are.
 - Then we'll ask you questions about those problems.
 - Here are some photos of common problems people face, many of them related to health.
 - Please take a few minutes to select five (5) problems that you think are the biggest difficulties in your community.
- ▶ We're interested in learning about things that make it hard for your organization to provide services and/or for your constituency to have good physical and mental health, and a good quality of life.
 - Some of the descriptions are one word and really meant for you to share more with us.
 - We'll give you a few minutes to make your selection.

Engaging & Asking Questions:

- ▶ Spend around 10 minutes going through questions and the topic-specific follow-up questions.
- ▶ Repeat for as many problems as time allows, leaving five or so minutes to wrap-up at the end.
- ▶ Use the same Prompting Questions for each of the five identified issues.

B. Focus Group & Key Informant Interview: Question prompter

One of the topics that you identified is _____

Questions:

1. Why do you see ____ as a problem that's related to your family/community's health?
2. What do you think creates this issue?
3. How do you see the problem affecting your local friends, family or neighbors?
Who is most affected by this?
4. What have people tried to do to address this problem? What has worked?
What are the biggest barriers for _____ (policy/program)?
What makes it hard to fix this problem in your community?
5. What has changed around this concern in the last 2 – 3 years?
Are there any new emerging trends or areas of concern in the last few years?
6. If this problem got better, how would your community look different?

Closing question:

- Are there other important health needs in your community that we have not already addressed?
- Let the audience introduce and talk through topics with any remaining time. If related to our categories, you can use topic-specific prompts below.

Conclusion:

- Thank you very much for your time today. The information you provided is very helpful for us, and we'll use it to help improve the health of your community.
- Next year we will publish the Community Health Needs Assessment that will summarize what we found, and that many people in your community will take action on.
 - If you would like us to send you a text or email with a link to that report, just provide us with your information.

Focus Groups Only: As a Thank you to you all we have a gift card for you as you leave.

C. Survey Questions:

1. **Would you say that in general your health is:**
 - Excellent
 - Very Good
 - Good
 - Fair
 - Poor
2. **Select 3 – 5 things that you believe make it hard to live and be well in this community.**
 - Can't get medical care
 - Not enough good jobs
 - Lack of affordable housing
 - Lack of good schools
 - Access to affordable healthy food
 - High cost of living
 - Unsafe community
 - Bad air and/or water quality
 - No friends or connection to community
 - High risk for natural disasters (fire, floods, earthquakes)
 - Lack of transportation
 - Lack of safe roads, sidewalks, bike lanes
 - Limited childcare options
 - Limited access to social services for me or my family members
 - Racism
3. **Select up to 5 of the biggest health problems you're facing.**
 - Aging problems (e.g. arthritis, hearing/vision loss, dementia, etc.)
 - Alcohol and/or drug misuse
 - Asthma/COPD
 - Being overweight
 - Cancer
 - Child/Partner abuse
 - Diabetes/Kidney disease
 - Heart disease/Stroke
 - High blood pressure
 - Learning problems
 - Mental health problems (e.g. extreme sadness, fear, worry, anger or stress)
 - Mother-baby care
 - Problems with mobility
 - Poor eating habits
 - Respiratory/Lung disease
 - Sexually transmitted diseases (STDs)
 - Dental problems
 - Vision/Hearing problems
 - No health problems
4. **Imagine a 10-step ladder. At the top life is great, a 10. At the bottom, life is not good, a 0. Which step of the ladder are you standing on right now?**
 - 10 (I'm living my best possible life)
 - 9
 - 8
 - 7
 - 6
 - 5
 - 4
 - 3
 - 2
 - 1
 - 0 (I'm living my worst possible life)
5. **In the last year, did you get all the medical care you needed?**
 - Yes
 - No
 - Did not need care
- 5b. **If you did not get all the medical care you needed, what do you think are the reasons why?**
Check all that apply.
 - Doctor or clinic (healthcare provider) did not understand my language, culture or identity
 - I'm uncomfortable speaking with a doctor
 - I do not have health insurance
 - I do not have a primary care doctor
 - There was no doctor that accepted my insurance
 - I did not know where to get care
 - Getting to the clinic was too hard
 - It costs too much
 - Inconvenient hours of operation
 - Location of medical care
 - Holistic treatments not available
 - Specialists not covered by insurance
 - Poor quality of doctors/nurses
6. **Select the resources that your community needs more of to help you live better.**
 - Childcare or senior care
 - Healthcare and prescription costs
 - Housing options
 - Legal services
 - Local food banks
 - Managing stress and depression
 - Neighborhood safety
 - Parks, recreation and outdoor activities
 - Personal safety
 - Social/Community events
 - Utilities/Internet
7. **Please enter your zip code, if you don't want to share your zip code, enter 00000.**

D. Prioritization Tools:

1. Health Need – Evaluation Worksheet

Addressing the health needs of community members is complex and often requires more than one approach with coordination across multiple sectors.

Based on the primary and secondary data presented select 3 to 5 health needs that you see as needing to be addressed.

Write the name of the need at the top, use the questions to the left to evaluate side-by-side the current resources, political will, infrastructure and shared goals/focus of each need.

Use your findings to identify the needs that, through collaboration, can be thoughtfully and intentionally addressed by multiple community sector partners.

PRIORITY NEEDS COMPARISON	1		2		3		4		5		6		7	
OPERATIONS	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No
Would tracked and shared progress/ data benefit multiple organizations and programs?														
Potentially, could there be 'quick wins' through collaboration and partnerships?														
Is there political willingness to act on this need?														
COMMUNITY PARTNERS/RESOURCES/ ASSETS	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No
Are there existing organizations/ programs addressing all or parts of this need?														
Do CBOs' goals/strategic plans list this need as an area of focus?														
Is there community willingness to act on this need?														
FINANCE	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No
Does this need have government/public funding streams available for those applying collaboratively?														
Are there current grants that could support some or all of this need?														
Does this need meet the vision/ mission of established government or philanthropic partners?														
EQUITY	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No	Yes	No
Are there organizations/programs focused on addressing this need with safety-net, low-income and minority populations?														
Will everyone in the community equally benefit from this need being addressed?														
Would addressing this need lessen absenteeism at work/school for everyone?														
TOTAL YES RESPONSES														

2. Questions to Consider

Do we have any unifying objectives/goals?

What does immediate success look like (1 – 3yrs)?

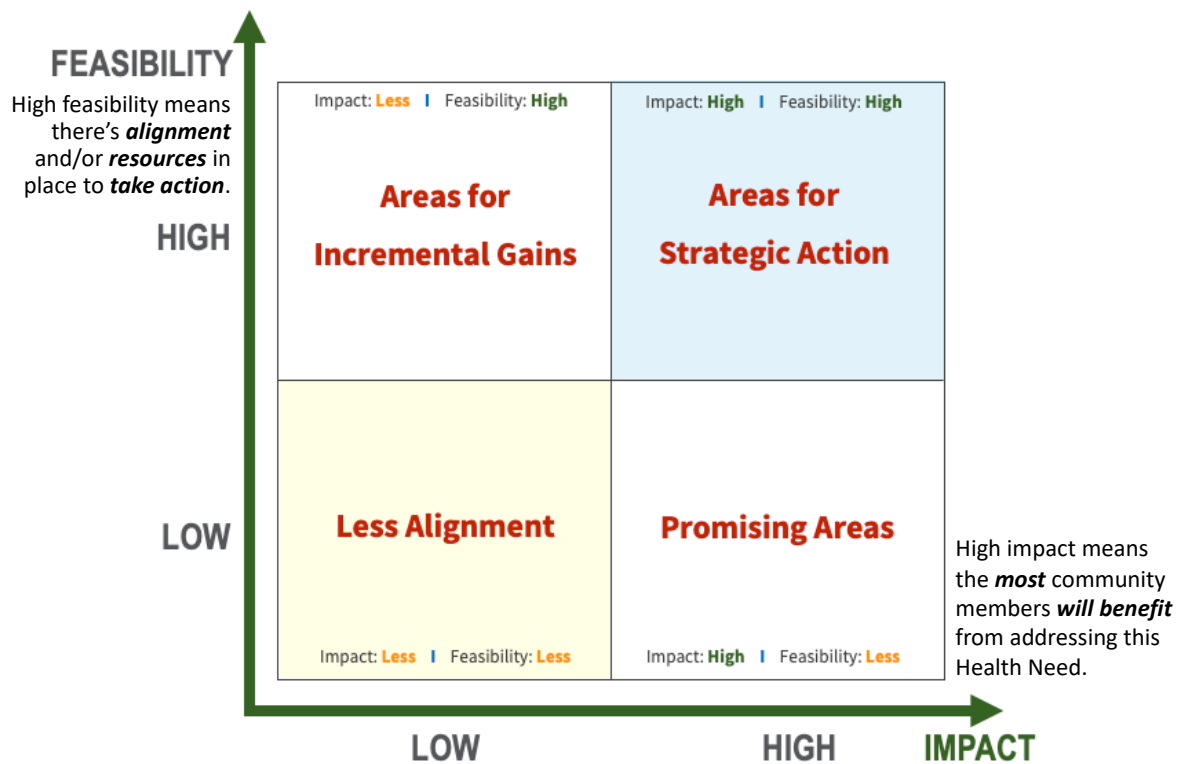

Is there available funding from grants or Quality Improvement Incentives (Payer) opportunities?

Would addressing this need free up resources for other community-wide needs?

Is this a community-wide or vulnerable population need?

3. Priority Needs Comparison
